The Scottish Institute for Policing Research

A 60 Second Briefing

The Scottish Institute for Policing Research (SIPR) is a strategic collaboration between 12 of Scotland's universities¹ and the Scottish police service supported by investment from Police Scotland, the Scottish Police Authority, the Scottish Funding Council and the participating universities.

Our key aims are:

- To undertake high quality, independent, and relevant research;
- To support knowledge exchange between researchers and practitioners and improve the research evidence base for policing policy and practice;
- To expand and develop the research capacity in Scotland's universities and the police service;
- To promote the development of national and international links with researcher, practitioner and policy communities.

We are an interdisciplinary Institute which brings together researchers from the social sciences, natural sciences and humanities around three broad thematic areas: Police-Community Relations; Evidence & Investigation; and Education & Leadership;

We promote a collaborative approach to research that involves academics and practitioners working together in the creation, sharing and application of knowledge about policing;

Our activities are coordinated by an Executive Committee comprising academic researchers and chief police officers, and we are accountable to a Board of Governance which includes the Principals of the participating universities and Her Majesty's Inspector of Constabulary for Scotland.

We work closely with Police Scotland, the Scottish Police Authority, the Scottish Government, Her Majesty's Inspector of Constabulary and the Scottish Parliament to ensure our research informs the development of policing policy in Scotland;

We engage in joint projects with colleagues in the Scottish Centre for Crime and Justice Research, and are a founding member of the European Police Institutes Collaboration (EPIC) and currently chair the Policing Working Group of the European Society of Criminology;

Since we were established in 2007 our key achievements include:

- Making significant contributions to evidence-based approaches to policing policy and practice closely aligned with the requirement for universities to demonstrate the impact of their research;
- The award of over £8 million in research grant income to academics in the participating universities;
- Supporting the development of a postgraduate community with over 70 students having completed or currently studying for PhDs on policing-related subjects since 2007;
- Investing in a dynamic knowledge exchange programme of over 100 events attended by more than 5,000 people;
- Establishing Scotland's first postgraduate programme in Policing Studies for police practitioners and those who work with policing organisations;

Introduction and Overview of 2014

A centre of excellence in policing research focused on evidence, innovation and professional development

In 2013, SIPR identified three strategic priorities to guide its activities over the next five years:

- Facilitating and contributing to the development of evidence-based approaches to policing drawing on research and analysis conducted in Scotland, the UK and internationally;
- Supporting a strategic approach to innovation in policing by testing new interventions and using knowledge exchange opportunities to examine new policing approaches;
- Supporting leadership, professionalism and organisational learning within policing by drawing on knowledge and skills within Scottish higher education to contribute to professional development and educational opportunities.

Through focusing on these priorities, SIPR aims to support and create opportunities for researchers across the consortium universities to engage in cutting-edge policing research and scholarship, demonstrate impact, build capacity, and enhance competitiveness in securing research, knowledge exchange and impact-related income.

As this eighth Annual Report illustrates, we have made significant progress in relation to these objectives during 2014. Through our strong relationships with Police Scotland, the Scottish Police Authority (SPA), HM Inspectorate of Constabulary for Scotland (HMICS) and Scottish Government, as well as through our participation in wider UK and international networks of researchers and practitioners, we continue to develop Scotland's reputation as a centre of excellence in policing research.

Our focus on **evidence-based approaches** to policing has seen researchers from across the consortium universities engage in a range of inter-disciplinary projects during 2014, supported by investment from SIPR and by awards from research councils and other funding bodies. Examples of this work can be found in this report and also includes:

- analysis of effective interventions to reduce crime as part of the UK ESRC funded consortium supporting that What Works Centre for Crime Reduction hosted by College of Policing (Dundee, Glasgow, and Stirling);
- studies of police-victim interaction in domestic violence cases and of reports of domestic abuse made to Police Scotland (Edinburgh and Glasgow);
- an analysis of police-Muslim relations (St Andrews) (see p. 22);
- a local case study analysis of the impacts of police reform on local policing from police,

community, and local authority perspectives (Dundee);

- an analysis of inter-agency support and protection provided by police, health care and social care professionals (Robert Gordon and Abertay) (see p. 20);
- an analysis of the challenges around missing persons investigations and the role families play in searching for missing relatives (Abertay, Dundee and Glasgow).
- an analysis of police interpreting in multi-lingual settings (Heriot-Watt and Abertay) (see p. 48);
- a range of projects taken forward by SIPR Practitioner Fellows (see pp. 27-35)

A further important development in ensuring the use of evidence to inform policing has been the partnership forged with HMICS to use academic research to help support their inspection process. Two early examples of this joint approach are the commissioning by HMICS of a literature review to assist with a study of multi-agency public protection arrangements for sex offenders and the carrying out of interviews in relation to an assessment of police responses missing person reports from hospitals and care homes.

SIPR also plays a key role in driving **innovation** in policing through the identification, application and independent evaluation of new ideas and approaches. Significant initiatives taken forward in 2014 include:

- introducing and testing the principles of procedural justice in police probationer training and routine encounters between traffic officers and the public by drawing on approaches developed in US and Australian contexts (Glasgow Caledonian, West of Scotland and Edinburgh) (see pp. 38-41) ;
- evaluating of the Rape Advocacy Pilot Project in Scotland (Glasgow);
- evaluating the Police Scotland Fife Division Stop and Search pilot project (Dundee and Edinburgh Napier);
- evaluation of the new Forensic Science Gateway (Strathclyde)
- developing a new Safer Communities Evidence Matrix for Scotland (Edinburgh Napier and West of Scotland) (see p. 18);
- developing of a mobile app to support child interviewers (Abertay) (see p. 24);
- Organising the fourth Scottish International Policing Conference with a focus on policing and technology, including the James Smart Memorial/SIPR Annual Lecture delivered by Cynthia Lum Director of the Center for Evidence-Based Crime Policy at George Mason University, Washington DC on *The Impact of Technology on Modern Policing*

In terms of **supporting leadership and professional development**, SIPR is able to draw on a range of expertise from across the consortium universities and its wider UK and international networks to help in the design and delivery of new programmes to enhance the professionalism of policing. Examples of such activities in 2014 include:

- working with Police Scotland to help develop their approach to future leadership programmes and their plans to establish a degree pathway for new recruits to the police service (Stirling and Dundee);
- working with the Scottish Police Authority to deliver a series of seminars as part of a new Strategic Development Programme (Dundee and Edinburgh);
- providing new crime and intelligence analyst training for Police Scotland (Edinburgh) (see p. 14);
- examining ways of accelerating professional judgement and decision-making in crime scene investigations (Edinburgh);
- organising a workshop on 'Professionalism and Policing' with speakers from Scotland, the UK and Europe reflecting on different approaches to recruitment, training and police education (Stirling) (see p. 76);
- delivery of Dynamic Forensics Evaluation and Training to law enforcement practitioners across Europe (Edinburgh Napier).
- Contributing to the new cross-sector executive Leadership for Outcomes programme for senior criminal justice practitioners.
- Continuing support for the SIPR Practitioner Fellowship programme.

2014 also saw the first three students graduate from the SIPR MSc in Policing Studies which is delivered by a consortium of five universities (Dundee, Glasgow, Robert Gordon, St Andrews and West of Scotland). One of the graduating students said of the programme:

The course provided me with the opportunity to broaden my awareness of policing issues at a local, national and international level. The course was designed to gradually build upon new learning, including an introduction to policing theories, communities at risk, research skills and leadership and management models. My dissertation allowed me to consolidate this new learning into research in an area of policing that not only interested me but uncovered relevant and important issues relating to the victims of racist hate crime in Scotland. I intend to use these findings to assist me and my colleagues in this area of policing. The course was challenging, interesting but above all highly enjoyable. (Nadine Aliane)

Achieving impact

Ever since it was established, SIPR has been focused on how research can be used to enhance the effectiveness, professionalism and legitimacy of policing. Central to this approach is a commitment to co-production, bringing together researchers and practitioners to jointly identify, design and deliver research and knowledge exchange projects. In addition, SIPR has drawn on three established models of evidence use to inform its approach to enhancing the connections between research and practice:

- **The research-based practitioner model** with its emphasis on professional education and training which SIPR supports through its knowledge exchange activities, Practitioner Fellowships programme and the MSc in Policing Studies;
- **The embedded research model** in which research is integrated into systems, protocols and practice tools and which SIPR has contributed to in 2014 through initiatives such as the What Works Centre for Crime Reduction toolkit, the design of protocols for child interviews, and training of officers in the principles of procedural justice;
- **The organisational excellence model** which attempts to foster a culture of organisational learning and 'research mindedness' which SIPR achieves through the strong collaborative relationships it has built between Scotland's universities and Police Scotland, SPA, and HMICS.

With the introduction of a requirement on universities to submit impact case studies for the **Research Excellence Framework (REF)** assessment process, there has been a renewed focus on demonstrating the value of policing research for policy and practice. In the most recent REF exercise, which reported at the end of 2014, nine universities within the SIPR consortium submitted 12 policing related impact case studies. See Table 1.

International engagement

As previous annual reports have highlighted, SIPR's reputation as a centre of excellence in policing research extends well beyond the UK and we now play a leading role in a range of international networks, including the European Police Institutes Collaboration (EPIC) and the European Society of Criminology Policing Working Group.

The value of these European relationships has been clearly demonstrated in 2014 by invitations to researchers from SIPR to be involved as partners in applications made under the EU Horizon 2020 Secure Societies Research Programme. SIPR has directly supported this activity through its Engagement in European Policing Research initiative which provides funding for researchers from Scotland to participate in preparatory research consortium workshops at which research proposals are being developed.

Table 1. REF 2014 Impact Case Studies linked to policing related research

University	Policing-related Impact Case Studies
Abertay	<p><i>Self Administered Interview tool</i>: developed by psychologists and used by police officers in the UK and Europe, the SAI is an innovative investigative device to enhance witness statements.</p> <p><i>The treatment and management of sex offenders with an intellectual disability</i>: this tool has become routinely used internationally in forensic services, and allows a means of monitoring the effectiveness of treatments.</p>
Dundee	<p><i>Perpetrator Identification in the investigation of child sexual abuse</i>: research at the Centre for Anatomy and Human Identification has helped in investigation and prosecution of child sex offenders across the UK.</p> <p><i>Protecting Intimidated Witnesses</i>: pioneering research led from Dundee on witness protection has helped shaping policy and practice in the UK and internationally, including changes to UK legislation and reforms to the organisation and delivery of witness protection in Scotland.</p>
Edinburgh	<p><i>Edinburgh Study of Youth Transitions and Crime</i>: findings from this study have led to major changes to the youth justice system in Scotland, including the diversion of young people away from formal interventions by the police and other youth justice agencies. McVie and McAra also won the 2013 Howard League Penal Reform Research medal for this work by researchers from the Law School¹.</p>
Glasgow	<p><i>Missing Persons</i>: In collaboration with Police Scotland, the Metropolitan Police Service and UK Missing Persons Bureau, researchers have led a major study of focusing on the experiences of missing persons and their families and the challenges of police investigations which has resulted in the development of new training materials for police officers.</p>
Heriot-Watt	<p><i>Access to justice for speakers of foreign languages</i>: the Police Interpreting Research Group have been involved in research which has led to changes to police practices for working with interpreters and have influenced legal professionals and policy makers in the area of communication support in investigative processes².</p> <p><i>Improving police investigation procedures, informing legislation and improving support for victims of stalking</i>: this research has changed police practice in UK police forces in investigating cases of alleged stalking, as well as raising public awareness of the nature and dangers of stalking behaviour.</p>
Robert Gordon	<p><i>Best practice guidance on responding to the psychosocial and mental health needs of people affected by disasters and major incidents</i>: research findings from several projects have informed this guidance, including work with police officers authorised to use fire arms, those involved in major incidents and working as hostage negotiators.</p>
Stirling	<p><i>EvoFIT: Applying psychology to the identification of criminals</i>: Originally conceived by Professor Peter Hancock and developed into an effective system used by police forces across the UK and abroad. A world-leading 25-60% of composites made with EvoFIT directly lead to an arrest, four times better than the best previous system used by police forces³.</p>
Strathclyde	<p><i>Global drug crime involving the illicit production of synthetic drugs and the emergence of new legal highs</i>: this project has resulted in new capabilities for law enforcement agencies by equipping them with new tools to identify the manufacturing routes of illicit drugs and linking this to criminal intelligence databases, and has also influenced the policy and protocols of the UN Office on Drugs and Crime</p>
West of Scotland	<p><i>Gang culture and youth offending in the West of Scotland</i>: this research focused on young people's involvement in gang violence and has had national and international influence on public debate about violent youth offending and the development of services by community-based agencies and the police in Scotland who work with marginalised young people and young offenders.</p>

¹ Lesley McAra and Susan McVie's work on the Edinburgh Study of Youth Transitions and Crime (ESYTC) was identified as being one of the most influential impact case studies of the 2014 Research Excellence Framework and has been highlighted by both the Academy of Social Sciences and the Russell Group. The ESYTC's findings on the effectiveness of policing and youth-justice interventions provided evidence for the Scottish Government's recent reforms to youth justice, including the Early and Effective Intervention Programme for under-16s and the Whole System Approach for under-18s.

² The impact case study on police interpreting submitted by the Centre for Translation and Interpreting Studies in Scotland, at Heriot-Watt University, came 1st in Scotland and second in the UK among units rated in its disciplinary peer group (Modern Languages and Linguistics) and thus acknowledges the fruitful co-operation between researchers and practitioners that CTISS has created between research and practice in this field.

³ The work of Professor Peter Hancock's group at Stirling on applying psychology to the identification of criminals and which has been developed into an effective system used by police forces across the UK and abroad, is also worthy of special comment, having been included in research which was awarded a score of 100% world-leading quality.

Through this process, I am delighted to report that Megan O'Neill (Dundee) and Liz Aston (Edinburgh Napier) were part of a successful 4.2 million Euro bid for a project examining ways to enhance community policing across Europe through the use of new technologies. SIPR's involvement in this bid resulted directly from its membership of EPIC and an invitation from the Finnish Police University College to join their consortium. SIPR are also a partner in a successful application made by the Norwegian Police University College to the Norwegian Research Council for a three year programme of research and knowledge exchange activity on New Trends in Modern Policing focusing on organised crime, policing mobile offenders, and trans-national policing.

Another highlight of our international activity in 2014 was the 3-day visit of academic and police colleagues from the Center for Evidence Based Crime Policy at George Mason University in the United States. Building on the very successful joint SIPR-CEBCP symposium held in Washington DC in 2012, the events in Scotland comprised a research symposium held at the Scottish Police College, a field excursion to Midlothian to hear about police-community partnership working, and an afternoon hosted by the Scottish Parliament examining the role of research and analysis in policing from the perspectives of practitioners, policy makers and academics. On the final day, the Director of CEBCP, Associate Professor Cynthia Lum, delivered the James Smart Memorial/SIPR Annual Lecture as part of Scotland's fourth International Policing Conference organised by SIPR (see pp. 77-81). I was also greatly honoured to receive the Distinguished Achievement Award in Evidence-Based Crime Policy by the Center for Evidence-Based Crime Policy (CEBCP) (see p. 49)

The benefits to Scotland of these different forms of international collaboration are considerable. For the academic community, they raise the profile of research conducted by Scottish universities and provide opportunities to be involved in prestigious, well-funded research programmes. For the policing community, there are significant benefits in terms of knowledge exchange, opportunities to showcase examples of good practice to an international audience, and scope to be directly involved in cutting-edge research as 'end users' of innovative products produced by international collaborative projects.

The SIPR Model: imitation as the sincerest form of flattery?

As previous Annual Reports have highlighted, the strategic partnership between the police service and universities established in Scotland eight years ago is the focus of increasing attention across the UK and internationally. The 'SIPR model' (as it is increasingly referred to) is now used as the template for a whole series of new, regionally based partnerships between universities and police forces supported by significant investment from the Home Office, College of Policing and the Higher Education Funding Council for England. Representatives from police-academic partnerships being developed in the North of

England, the East Midlands, London and Northern Ireland have all sought information and advice from SIPR about how to design and deliver large interdisciplinary and multi-institutional collaborations.

Further afield, the Dutch police have also expressed interest in exploring the scope for a SIPR-style approach to linking universities with their new national police force in the Netherlands. Such UK and international interest underlines the way in which SIPR is seen as an exemplar of best practice in police-academic partnerships.

Next steps: policing and research in an era of reform

The publication of this annual report neatly coincides with the second anniversary of the establishment of Police Scotland. The creation of a national police service (along with a national fire and rescue service) represents one of the most significant programmes of public sector reform seen in Scotland in recent years and SIPR has (as previous annual reports have highlighted) engaged with the research and knowledge exchange opportunities that this transformative moment has created.

SIPR, in partnership with the Scottish Centre for Social Research and What Works Scotland, has also recently (February 2015) been awarded a 4 year contract by Scottish Government to evaluate police and fire reform and assess the lessons learned from these changes for other future large scale reforms.

While police reform and associated changes to policy and practice are helping to define a new research and knowledge exchange agenda in areas like local policing, forensics and police leadership, the changing landscape of policing in Scotland also has a broader strategic significance for SIPR in terms of the opportunities it creates to work closely with a range of organisations involved in the delivery and governance of policing, from Police Scotland and the Scottish Police Authority to HMICS and Scottish Government. Reform has therefore helped reposition SIPR as a key actor in helping inform decision-making and professional judgment at a time when policing is having to adapt to the pressures of budget cuts, changing patterns of criminality and the needs of increasingly complex communities. Now more than ever policing in Scotland needs access to a knowledge base that can help provide critical insights into issues of effectiveness, professionalism and legitimacy.

Finally, the annual report provides me with an important opportunity to thank the wide range of people and organisations whose support is vital to the success of SIPR as a collaboration of research, practitioner and policy communities. I am hugely grateful for this support for the ways in which it has contributed to make SIPR an internationally recognised centre of excellence for policing research.

*Professor Nicholas Fyfe
SIPR Director
April 2015*

SIPR Perspectives on Policing: Critical Challenges for Policing Professionalism & Education

Tara Fenwick, University of Stirling
Associate Director of SIPR: Education and Leadership

In the first of a new series of short essays by members of SIPR in which they offer their own reflections on contemporary policing, Professor Tara Fenwick, Associate Director for the Education and Leadership Network, discusses the critical challenges that are faced by professionals. Professionalism is a seductive category, in policing as much as in all other professions. It has attracted many, many meanings and conflicting analyses, including those showing that it is no longer a viable category given the range of occupations claiming to be professions.

Many recent writers conclude that the notion of 'professionalism' is at best a temporary construction in a particular context (Evans 2008; Evetts 2013; Martimianakis et al. 2009; Stronach et al 2002). That is, there is no solid 'thing' that is professionalism, but a set of discourses – different ways of thinking and speaking about something. In fact Julia Evetts (2013), a leading expert on professions, claims that the question of definition – *what* is professionalism – has long ago lost relevance. What is far more interesting, she argues, is *why* so many occupational groups seek professionalism, and what it means to them.

Discourses of professionalism are mostly used as powerful ideology wielded for governance and control (Evetts 2013; Fournier 1999). Many actors are complicit in maintaining their governing power. Practitioners aspire to professional status and privilege. Professional bodies seek to gain or retain 'closure' of their autonomy and competence. Employers seek control of workers by invoking the high performance standards and responsibilities of 'professionalism'. An anxious society wants people it can trust to be altruistic and demands 'professionalism' – often defined vaguely as an all-encompassing ethical integrity.

Meanings of professionalism

It is easy to make a list of virtues that we think ought to be inculcated in all new practitioners so that they become 'professional'. And it is just as easy, as research has shown, for new professionals to perform these characteristics 'handily' while they are being assessed (Rees and Knight 2007). Such virtue lists are often marked by unrealistic rhetorical inflation – including hints of heroism and redemption - while reducing all practitioners to a single universal ideal. If in policing we want to move beyond this sort of empty exercise to actually help new professionals learn to grapple with the ethical complexities and dilemmas of policing practice, we need to return to core concepts of professionalism.

Traditionally the condition of professionalism defined a social contract of trust between society and an occupational group. Sociologists like Sullivan (2005) explain that a profession is awarded some autonomy and monopoly in its practice, status of its knowledge,

financial reward and self regulation in exchange for the guarantee of professionalism: altruistic service to the public, practiced with ethical diligence, integrity, and guarantee of quality. This position understandably led to the requirements for professional education to instill the moral attitudes and behaviors in new professionals that will ensure this service. However the flipside of this development is a tendency then to define professionalism as a set of ethical behaviors rather than as a more critical orientation assessing the struggles for control in the name of professionalism.

Martimianakis et al (2009) have created a simple framework to summarise four main views about how professionalism works, and the limitations of each.

- *a list of desirable qualities or behaviors.* This checklist approach reduces the complexities of professionalism, is narrowly focused on the individual, and doesn't explain how these traits arise.
- *a protected role,* with particular definitions of competence and boundaries of activity. Normative definitions like this do not respond well to the contingencies of context, or to socio-economic and political concerns that fashion a role's expectations and scope.
- *a social construction.* Professional identity is socially constructed and sustained through institutional structures such as the culture and values of a particular unit or region in which professionals work.
- *a means of social control of knowledge and privilege.* An occupational group defines the boundaries of service and expertise, gaining control of the territory thus created (called professional 'closure'), and then insists on monitoring its own service provision. This suggests important questions: who is setting the standards, to serve what interests?

These different perspectives often exist simultaneously in a given profession such as policing. This creates problems for practitioners trying to understand what is expected of them, as well as for a profession attempting to strengthen its control or at least to standardise its education and thus guarantee its reliability in quality services.

Challenges for public sector professionals

Besides these difficulties of definition, public sector professionals like police confront increasingly difficult challenges in contemporary society.

Conflicting demands. Professionals must serve the interests of the individual client as well as the broader needs of society - the 'one vs. the many' problem - which are not often aligned. Nor is there always consistency between the demands of a professional's employing organisation, the broader ideals of the profession, and the individual's personal allegiances of 'the right thing to do'. Finally, professionals increasingly find themselves caught in conflicts between demands to offer quality service or care, and demands to be more efficient and cost-saving. These conflicts lead Larry May (1996) to write that professionalism is always a matter of 'negotiated compromises'.

- 1) *Fast-changing knowledge and evidence of what works.* Evidence-based policing is a relatively new – and welcome – phenomenon. However the changing views about what counts as the most useful 'evidence' for particular contexts, and the rapid developments of policing knowledge on many frontiers such as cyber crime, GIS intelligence, and predictive crime mapping, are reconfiguring what constitutes good practice and professional responsibility.
- 2) *Partnership work and interprofessional practice,* which is becoming expected in most public sector services including policing, can blur professional identities, the expectations of participating professional, and the accountability for what happens.
- 3) *New digital technologies,* such as social media and wearable technologies, are transforming professional practice and raising difficult new ethical issues for police officers.
- 4) *Increased audit.* Analysts argue that, particularly in the UK under general conditions of 'new public management', there has been a shift from trust in professionals' competency and freedom of their discretionary judgement to external audit, particularly focused on external measures of performance outcomes. Increased audit often means more paperwork and performance management systems, which intensify professionals' workload. It also signals a shift in power from the profession itself to the employing organisations.
- 5) *Declining public trust in professions and increased societal anxiety about the quality of service.* Research shows that these trends are evident more in some areas and for some professions than for others (Evetts 2013). However many professionals in health, social care, education and policing – perhaps particularly in the UK – argue this is a major challenge for them.

So what for policing education?

These challenges should prompt us to look very closely at how we are educating professionals. Presumably we want education to support novices to learn how to manage what faces them: massive uncertainty and dynamic complexity. Perhaps we need to ask ourselves some fundamental questions about the sorts of capabilities that will serve them best.

- Are we helping professionals learn how to think critically and respond flexibly in uncertainty? (or, is our training still focused on memorizing units of knowledge?)
- Are we helping professionals learn to work effectively in shifting webs of relations? (or, are we continuing to train and test them as though they work as isolated individuals?)
- Are we helping professionals learn how to build relationships & trust, how to initiate collaborations with diverse partners, and how to problem solve? (or, is our training continuing to focus on discipline, control and protocols?)
- And finally, how are we preparing professionals for the work of negotiating compromises across competing demands and difficult dilemmas of professionalism?

From Fenwick, T. (forthcoming 2015).

Reconceptualising Professional Responsibility in New Regimes of Governance. London: Routledge. [See: http://www.sipr.ac.uk/downloads/fenwick_police-challenges.pdf for slides of a related presentation]

SIPR Research, Knowledge Exchange and Capacity Building Awards

Supported by funding provided by Police Scotland, SIPR regularly awards research and knowledge exchange grants on topics aligned with current policing priorities. These awards are intended to support:

- Research that is relevant for policing in Scotland;
- Knowledge exchange involving academic, practitioner and policy communities;
- Enhancing the UK and/or international visibility policing research in Scotland;
- Development of research capacity and capability within universities and policing in Scotland.

The following articles report on recent awards relating to the development of training for SPA Forensic Services Crime Scene Examiners; bespoke training in statistical analysis and data modelling for newly recruited crime and intelligence analysts from Police Scotland; the development of the Safer Communities Evidence Matrix; Interagency adult support and protection practice of police and health and social care professionals; the experiences by Muslims of airport security; and two projects on cyber security and computer applications.

The Professional Judgement and Decision Making expertise of Scene Examiners is of the utmost importance

Accelerating Professional Judgement & Decision Making Expertise: Feedback and Scenario-Based Training in Crime Scene Examination

Dr Amanda Martindale (*Human Performance Science Research Group, Institute of Sport, P.E. and Health Sciences, University of Edinburgh*) and Prof Dave Collins (*Institute of Coaching & Performance, University of Central Lancashire*)

Scene Examination (SE) is a crucial part of the Forensic Services offered by the Scottish Police Authority (SPA) in the provision of an integrated 'crime scene through to court' approach. In fact, the importance of skilled Scene Examiners (SEs) "cannot be underestimated"¹. SEs meticulously search the crime scene recording and recovering forensic evidence which can be used to prove or disprove if a crime has occurred. These environments typically comprise stressful conditions, ill-defined competing goals, conditions of uncertainty and pressured decision making².

Given the inherent complexities of SE and the huge amount of visual information potentially available, Professional Judgement and Decision Making (PJDM) expertise of SEs is central to successful delivery of this service. Delivery is a series of judgements and decisions. SEs are required to process vast amounts of information, think on micro and macro levels (often concurrently) and rapidly formulate and enact coherent plans of action. Development of PJDM expertise has been studied in several domains (e.g., psychological support, elite sport and coaching³) and is readily applicable to human performance. Indeed, as SEs develop this expertise, cognitive development, knowledge structures and reasoning processes become more sophisticated and enhanced⁴. Yet, these processes are inherently 'covert' - difficult to 'see', understand and train in developing practitioners.

Previous work exploring PJDM in SE has attempted to 'make thinking visible' by accessing and capturing thought processes of experienced SEs⁵. This initial work involved the use of Applied Cognitive Task Analysis (ACTA⁶) to understand the cognitive demands of SEs and to identify key elements required to perform proficiently. This meta-method comprises three mutually complementary techniques (task diagram, knowledge audit and simulation scenario) which also tap into different elements of cognitive skill⁷. This offers a unique window on the PJDM of SEs, transforming covert thinking into detailed observable information about actions taken, situation assessment and the use of critical cues.

In pursuit of these positive goals, this SIPR-funded project's aims were to provide feedback to SEs involved in pilot work exploring PJDM expertise in SE (funded by a University of Edinburgh KE grant) and to develop a simulation scenario training tool as a means of accessing and documenting expert knowledge. This work was designed to establish 'cognitive authenticity' (emulation of the features perceived in the performance environment that support decision making⁸) within the SE profession and therefore contribute to sustainability for the future in terms of retaining expert knowledge and training PJDM expertise within the workforce.

Key Findings

Results suggest that knowledge elicitation tools such as ACTA are effective in generating information about the cognitive processes required for effective SE performance, providing a range of operational uses and offering valuable additions to existing training. Feedback from SEs supports research and literature in this area that Cognitive Task Analysis techniques provide measurably greater quantities of useful information about how to perform tasks proficiently than other methods such as observation or self-generated explanations⁹.

Several implicit findings emerge from the data additional to the explicit and generally positive perceptions reported and perhaps indicative of SE culture. For example, the potential to move towards a more adaptive expertise base with consequent gains for quality of service emerged as a consistent theme. Current culture within SE appears to be overly geared towards 'competent' practice characterised by the prevalence of SOPs as markers of 'quality' and

the use of competency-based assessment in order for SEs to reach baseline levels of service provision. Indeed, responses generated reflect this culture (e.g., some difficulty in 'thinking on the spot' and being 'unsure' if responses were 'correct') suggesting that perceptions of 'what is expected' are procedurally based.

In contrast, other responses suggest some inherent drivers (indeed desire) for SE culture to be expertise-based. This would be characterised by ongoing training and development opportunities for SEs (largely embedded within practice rather than bolt-on 'top-up' courses) plus development and enhancement through a 'Community of Practice' approach. Learning systems and structures enabling SEs to share experiences and explore the 'shades of grey' inherent in practice would relieve competency-based constraints and make for a more flexible and adaptable workforce. Positive exemplars of this approach are apparent from a variety of professional domains including nursing, military and elite refereeing¹⁰.

Participants reported that every scene/scenario is different and that there will always be challenges that SEs may not have come across before. This complex environment highlights the need for adaptive expertise over competency. Given the current financial and other resource constraints imposed on SE, we should stress that once developed and established these practices would be cost-neutral.

Scene Examination is a crucial part of the Forensic Services offered by the Scottish Police Authority

Simulation Scenarios: A Future Training Method

The simulation scenario of a complex and major incident developed to incorporate four separate but related scenes of crime (first deposition site, deceased's home address, second deposition site, suspect's home address). The scenario included photographic stills and panoramas and was designed with support from the Forensic Services Scottish Multimedia Unit.

SEs responses to the simulation scenario (including actions, situation assessment, critical cues and potential errors someone less experienced may make) were synthesised to form exemplar responses from SEs in the East, West and North regions of Scotland. These products of the ACTA method highlight potentially important regional differences in the effectiveness of the approach to the examination of a scene by SEs and provide an exemplar of the type of training tools that could be generated as part of a wider expertise-based training environment¹¹.

This work is a unique opportunity to invest in our people. It will allow us to have a greater understanding of expertise within scene examination activities and therefore inform our training system development.

A key benefit of this research is that we can use it to make thinking visible and train our staff from competent to expert level quicker therefore delivering a more effective service.

Dr Victoria Morton, Head of Scene Examination, SPA Forensic Services

AQMeN Police Analyst Training

Professor Susan McVie, Heather Alexander and Vernon Gayle
University of Edinburgh

The aim of this project, funded under the SIPR Small Grant Programme, was to provide two days of bespoke training in statistical analysis and data modelling for newly recruited crime and intelligence analysts from Police Scotland. The project was developed and delivered by members of the Applied Quantitative Methods Network (AQMeN) from the University of Edinburgh, working in partnership with the Principal Trainer from the Scottish Police Training College.

This project built on established relationships between members of AQMeN, SIPR, Police Scotland and the Scottish Police Training College and further developed two earlier training initiatives developed by the AQMeN team. The first of these was a pilot training course conducted in 2011, funded by a University of Edinburgh KE Grant, which delivered two days of training aimed at improving the quantitative data analysis and GIS skills of police crime analysts from Fife Constabulary. The longer term aim from this pilot training was to develop and improve upon this initial 'proof of concept' project in order to offer bespoke training courses to the Scottish Police Training College on a commercial basis as part of their annual CPD programme (and potentially broadening this out to other organisations). The second initiative was a half day introduction to statistical modelling attended by 28 crime analysts from Police Scotland in February 2014. This event was aimed at those who work with data and would like to find out more about what statistical modelling can be used for.

Project details and objectives

The current project built on the above two earlier two initiatives by developing a more bespoke approach to learning about the principles of and theory behind data analysis and modelling. The first day of training, held on 17th November 2014 and delivered by Professor Vernon Gayle, focused on introducing basic statistical concepts and techniques at a conceptual level in order to show how statistical ideas could address major social scientific issues. The training covered: definitions of variables and cases; different levels of measurement (categorical and continuous variables); measures of central tendency; measures of dispersion; probability and p values; experiments and hypotheses; testing differences in means (t-test); presenting and interpreting data tables; correlations and coefficients of determination; and tests of association. This initial day of training focused on the theory rather than practical application of statistical testing, in order to provide the groundwork for the second event.

The second day of training, held on 13th January 2015 and delivered by Professor Susan McVie, was aimed at providing more in-depth knowledge of statistical concepts and hands-on experience of conducting analyses. The specific aims of the workshop were to: increase understanding of key statistical concepts that underpin analytical methods; practice using a range of analytical tests and procedures for exploring statistical relationships; and develop greater confidence in applying, interpreting and explaining these statistical techniques. The training started with a revision test of concepts covered in the first training day, and then focused on four main sessions covering: measurement types; presenting statistical data; calculating differences;

and hypothesis testing. The course built up in complexity over the course of the day, with each session including both a review of the theory and a set of easy to follow practical exercises (spreadsheets containing all the answers were also provided).

Course evaluation

The first one-day course was attended by 8 recent police analysts from Police Scotland, of whom 6 provided detailed feedback, indicating that the course met or exceeded their expectations. The materials provided and the tutor's knowledge were rated as very good, and all felt that the informative value of the event was very good or good.

The trainer used simple examples to illustrate his points which made abstract theories accessible and easier to understand.

He's very passionate about the subject and got everyone involved in the subject matter throughout the input. All of our questions were answered with patience and understanding which was greatly appreciated

When asked what they would like to be covered in the second part of the training, most asked for more practical examples and hands on experience, and to look at police-related data that they could relate to their own work. All of this feedback was taken on board in designing day two.

Positive comments on the second day's training focused on the knowledge and experience of the trainer ("who simplified the learning process for the duration of the course"); the application of the theory

to crime related examples; demonstrating practical ways of displaying data and identifying trends that could be adapted in their work; and the mix of both theory and practice. Interestingly, one respondent stated:

“ All of it was useful and enjoyable, acting as revision as well as learning new concepts.

All of the participants stated that they would be likely to recommend the event to colleagues, and one in particular stated:

“ The course is probably more beneficial to some analysts than others depending on the nature of their current role; but for a day or two of input I think it would be useful to analysts who have longer service and not just those completing the initial analytical training modules.

Lessons learned

Overall, the feedback from the training courses was positive and it appears that the level of the training was largely appropriate for the participants. The introductory session laid important groundwork in describing concepts and helping the participants to understand the fundamental aspects of key statistical concepts. The second session then built on this introduction to develop greater understanding, specifically with reference to crime related examples, and practical hands-on experience in conducting data analysis and presentation. It is clear that the two components of the training worked well together and, should the course be delivered again, it would be worthwhile incorporating both days.

Most of the participants had fairly rudimentary statistical skills and the level of training provided was suitable for the audience. The first day of training was largely unproblematic; although the second day could have benefited from being extended in order to spend more time going over the practical examples on hypothesis testing and calculating confidence intervals. While most of the participants felt that their knowledge had been increased and enjoyed the practical sessions, it is less certain whether they felt confident about applying and explaining the techniques to others on a day to day basis.

It is possible that another half day which focuses on developing a specific practical example from start to finish might help to boost confidence. Nevertheless, it was clear that some participants coped well with the training and were fairly confident about applying it in their work. These individuals would benefit from even more advanced training, and there was some appetite for this.

Those who said the course was not of particular benefit mainly felt this way because it did not relate to their current work. While this course was targeted at

new recruits, it was noted that there may be greater benefit in making the course accessible to experienced police analysts and tailoring it to those who have current responsibility for working with this type of data. This may have a greater payback in terms of building capacity within Police Scotland, than providing training to those who have no immediate need of it.

Working with the Scottish Police Training College was very beneficial because the Principal Trainer was able to liaise with the participants and had background knowledge of their level of experience, which was beneficial in informing the course leaders.

The participants were familiar with the training facilities and there were no issues around data or software (all practical sessions were conducted in excel). It is recommended that this training be considered alongside the wider professional development of the Police Scotland analysts and a widespread needs assessment conducted on exactly what capacity building needs exist in terms of statistical skills.

Therefore, if these training workshops were to be run again the following should be taken into account:

- There should be no restriction on the length of service of participants.
- The participants should have a similar level of statistical knowledge and expertise.
- The training should have a practical relevance to their current role.
- The course should be conducted over 2.5 days, with additional time dedicated to working through practical examples and building confidence in the application of techniques.
- The training should be coordinated in partnership with the Scottish Police Training College and a needs assessment conducted prior to training delivery.

Follow up activity

Discussions are ongoing with Police Scotland and the Scottish Police Training College as to what further training might be provided. In the first instance, a half day advanced introduction to statistical modelling (building on day one) is being developed in collaboration with the Administrative Data Research Centre – Scotland. In addition, we aim to discuss with the Principal Analyst for Police Scotland what further training might be beneficial in light of current and potential future strategic and operational priorities. We are aiming to develop the day 2 materials into a more detailed course manual that can be shared with Police Scotland. Finally, we will be conducting a longer term evaluation of the outcome of these training events to determine what impact it has had in terms of improving individual work practices and increasing value of data analysis for Police Scotland.

Scoping Exercise for the Safer Communities Evidence Matrix Scotland (SCEMS)

Dr Elizabeth Aston, Nick Currie and Dr Robert Kukla (*Edinburgh Napier University*) and Professor Kenneth Scott (*University of the West of Scotland*)

The development of the Safer Communities Evidence Matrix Scotland (SCEMS) has emerged from earlier work undertaken by Professor. Ken Scott and Dr Liz Aston, which had sought to develop and provide an evidence based database for local policing in Scotland – the Scottish Local Policing Evidence Database (SLoPED). The original database, a full description of which is available in Aston and Scott's SIPR Briefing Paper No. 13ⁱ, exists in word format and confined itself to an examination of evidence based policing in line with a 'what works' approach to effective local policing strategies. The work had been funded through a SIPR Improving Police Action through Knowledge Transfer (IMPAKT) grant and developed in a pre-Police Scotland context in response to the needs of the reform programme's Local Policing work stream. SLoPED research was presented across X and Y axes, where the Y axis related to 'policing principles' (community engagement, crime reduction and partnership working) and the X axis to 'research methodology' (experimental, non-experimental, and conceptual).

Over time it became clear that this approach appealed to organisations beyond the Police and in July 2014 Dr Liz Aston received a small SIPR grant to conduct a scoping exercise on the development of the Safer Communities Evidence Matrix Scotland. The intention of this project was to provide an opportunity to: review the feasibility of incorporating additional categories in line with the Building Safer Communities agenda; provide IT support to identify how the database might be delivered online; and consult with Police Scotland and other partners.

The development of SCEMS

The aims of SCEMS are both broader and more dynamic than SLoPED. Its breadth lies in the attempt to add criteria derived not simply from the policing principles enshrined in the Police and Fire Reform (Scotland) Act 2012, but to include and incorporate some of the key principles of the Scottish Government's Building Safer Communities (BSC) Programme.

To this end, in addition to 'community engagement', 'crime reduction' and 'partnership working', two further categories have been added to the Y axis, 'harm reduction' and 'reducing re-offending', both of which are highlighted as key aims of the BSC Programme Vision for 2020. The X axis, which previously represented 'research methodology', will now reflect 'policing approach', presented on a scale from 'reactive' to 'proactive' and 'highly proactive'. This will enable users to gain a visual message when they look at the matrix and where entries sit. Furthermore, SCEMS is to become a more dynamic matrix which will also break down information based on specific criteria – for example: the success or otherwise of the policing strategies employed; research scope (individuals, groups, micro-places, communities/neighbourhoods and municipality); the year in which the research was undertaken; and the research methodology employed.

A number of ways of representing the research were examined including: Cynthia Lum and colleagues' 'Evidence Based Policing Matrix' (Lum, Koper and

Telep, 2011ⁱⁱ and 2012ⁱⁱⁱ); Gloria Laycock's (2014) summary of research highlighted in her SIPR presentation 'What Practitioners need to know about what works'^{iv} and the Scottish Centre for Crime and Justice Research (SCCJR)'s 'Security of Mega Events Research Grid'^v.

Although there were strengths and weaknesses to each it was felt that the Mega Events Research Grid in particular provided some useful ideas in terms of how SCEMS could be presented. However, it should be pointed out that feedback from possible future users of the Matrix and BSC stakeholders is also being sought. The essential strengths of the Mega Events Research Grid lie in its visual simplicity and ease of use. It allows those using it to filter research according to a range of criteria and in so doing narrow down results in such a way that only those that are most immediately relevant appear. The ability to filter out unwanted or unnecessary research is essential for the success of SCEMS since the amount of available research covered by the intersection of policing and the BSC criteria is likely to be considerable. When users hover over symbols, which are used to represent entries in the matrix, they reveal a key message about the study.

Future directions

It is anticipated that the wider remit of SCEMS will also be of considerable benefit to groups and organisations whose interest in community safety and harm reduction go beyond that traditionally

associated with policing and crime reduction. To this end, in addition to Police Scotland, BSC partners such as the Violence Reduction Unit, The Poverty Truth Commission, Community Justice Authority, and other independent organisations such as SACRO, have expressed considerable interest in SCEMS. It is hoped that along with further funding, the involvement of such organisations, as well as that of grass roots community groups, will lead to the development of a national evidence matrix that would be accessible to practitioner and policy communities and would bring together a range of evaluated research and evaluated and non-evaluated practice information.

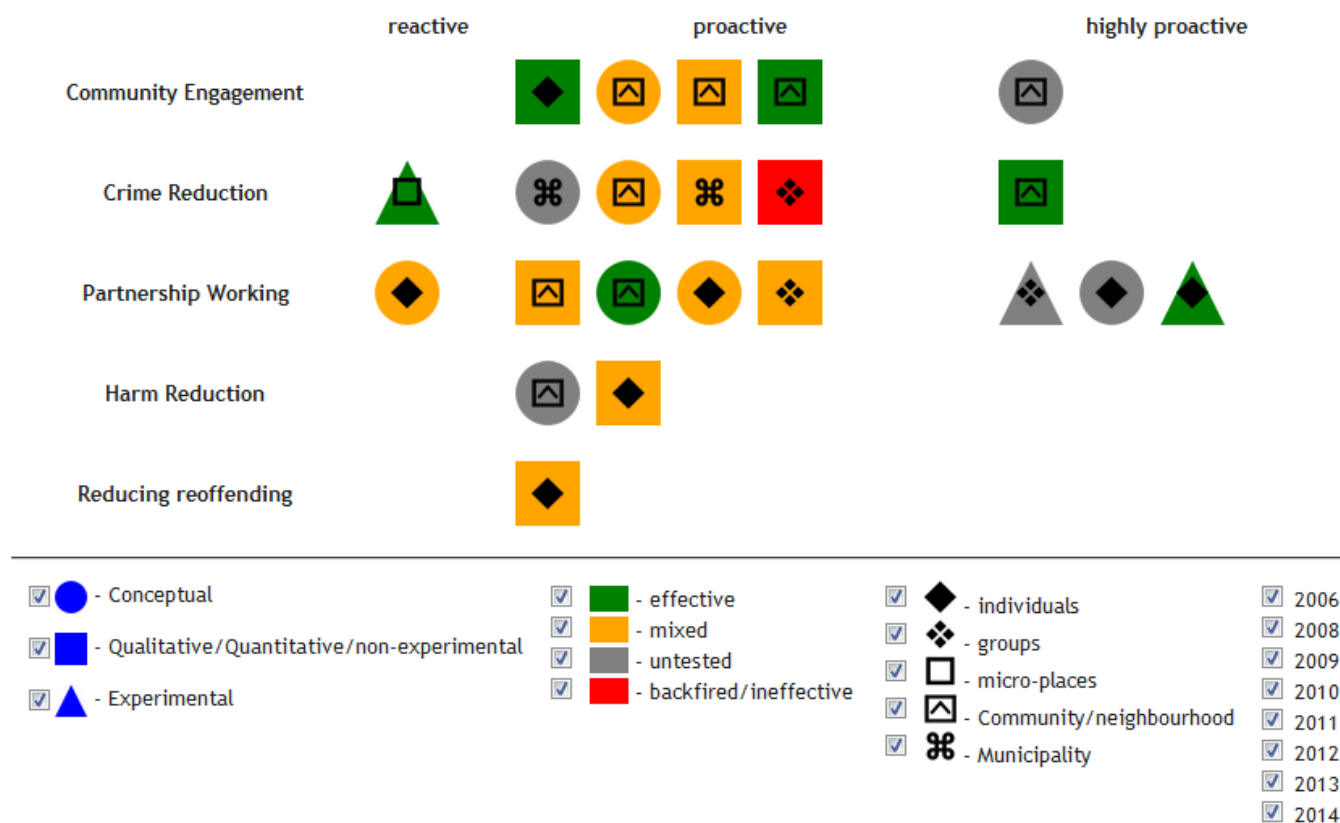

SCEMS also aims to strengthen the evidence base on which policy and practice can be developed in Scottish policing. However, it is not only of relevance to policing in Scotland but will also create a source of evidence about good practice in policing and community safety which can be used by community partners to help inform effective models of partnership working with the police and other community safety organisations.

Interested parties are encouraged to get in touch with the researchers (Contact: Dr Elizabeth Aston, Senior Lecturer in Criminology, Edinburgh Napier University, L.Aston@napier.ac.uk) to discuss the development of SCEMS.

Figure 1

Interagency adult support and protection practice of police and health and social care professionals: a realistic evaluation approach

Project team members : Dr. Sundari Joseph (Project Lead), *Interprofessional Education Research RGU & University of Aberdeen*; Professor Lesley Diack, *School of Pharmacy & life Sciences, RGU*; Mrs. Inga Heyman, *School of Nursing & Midwifery, RGU*; Professor Susan Klein, *Director Aberdeen Centre for Trauma Research*; DCI Samantha McCluskey, *Domestic Abuse Task Force, Police Scotland*; Dr Penny Woolnough, *Police Scotland (now Abertay University)*.

This project was funded by SIPR as part of its SIPR Research and Knowledge Exchange Programme in 2013-14.

The purpose of this project was to investigate the interagency Adult Support and Protection practices of police, health and social care professionals in Scotland by means of a 'Realistic Evaluation Approach'. The study comprised of two specific phases. The first phase sought to establish the 'state of play' for cross boundary working by: identifying the gaps in interagency practice; evaluating the education and training needs of professionals working in the area of adult support and protection, and identifying information sharing practices. Focus groups (Figure 1) with members of the police and health and social care professionals were conducted in each of the three Police Scotland Command areas. Thirteen focus groups were conducted, with 101 professionals participating, and key themes were identified. The second phase will inform the development and evaluation of future interprofessional training resources and identify key performance indicators (KPIs). These KPIs will enable subsequent evaluation and monitoring of practice for all professionals involved in adult support and protection.

Details of the background, project partners, and study design were featured in the SIPR Annual Report for 2013. A full report on the work was published as a SIPR Research Summary in January 2015, and can be seen at http://www.sipr.ac.uk/downloads/Research_Summaries/Research_Summary_19.pdf

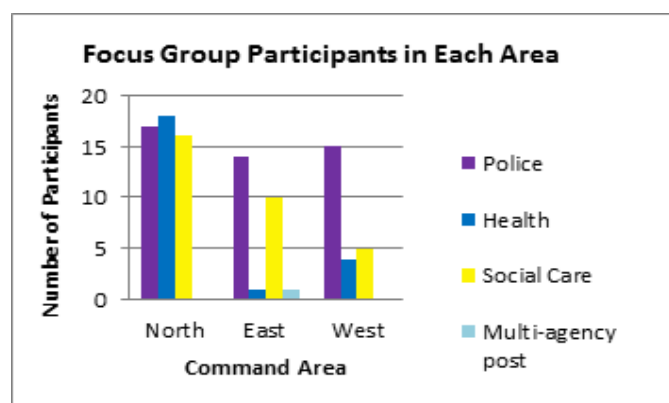

Figure 1 Focus group participants in each area

Major Findings

The following key themes were identified:

- **Information sharing** included discussions on two main topics. Firstly, the development of an at risk persons' database which may be available to all involved in protection issues in the future. Secondly, participants identified existing issues with information sharing across the different professions often exacerbated by the need to protect confidentiality, with police and social work demonstrating frustration at healthcare professionals' perceived reluctance to share vital information.
- **Relationships** highlighted that 'team working' results when organisations are co-located and/or informal relationships are established resulting in greater collaborative working practices and the development of trust for information sharing.
- **People and processes** There was perceived over reporting by the police of persons who may not 'fit the 3-point test' resulting in some areas reporting less scrutiny of police reports. Conversely when more than one agency is involved in a case there was a reliance on the police to submit the report when all agencies should have submitted.
- **Lessons from child protection** identified that there were already established and effective processes of information sharing and case conference.
- **Environment** related to the lack of places of safety for at risk adults to recover from an acute episode. The closure of safe environments such as National Health Service hospital wards has led to individuals being inappropriately 'locked up' in police cells.
- **Implementation of The Adult Support and Protection Act 2007¹** Participants felt that this Act had not fully met the needs of the at risk adults of harm and has required some challenging decision-making by professionals to provide appropriate support.
- **Regional variations** It appeared that remote and rural areas had developed more cohesive team arrangements and practised cross boundary working. Urban locations tended to report fragmented team working which often resulted in a lack of information sharing.

Phase 2

The interprofessional education (IPE) programme in Aberdeen has delivered multi-agency workshops to police officers and undergraduate health and social care courses. This approach was evaluated positively demonstrating an awareness of public protection issues and an appreciation of the different professionals' roles in interagency working practices.

The mapping of Key Performance Indicators (KPIs) and learning from pre-qualifying to post qualifying roles are seen as critical to the development of the future workforce of health, social care and police professionals. In this study the KPIs focus on inter-organisational goals to achieve the best practices for public protection. The KPIs have been developed based on Barr's competency framework for interprofessional working and informed by the evidence from this study².

Pre-qualifying KPIs relating to the attributes that health and social care graduates and police probationers should acquire on qualification

- Recognise inter-agency working and professional expertise in public protection
- Demonstrate awareness of public protection legislation and issues of concern
- Analyse challenging situations with client groups and consider solutions using team approaches
- Analyse effective collaborative practice, evaluating his/her future contribution to working this way.

Initial post-qualifying KPIs for professionals working with the public

- Recognise and understand the police and partner agencies' roles in public protection legislation
- Explain his/her role and responsibilities clearly to other agencies and discharge them to the satisfaction of those others
- Work flexibly across organisational boundaries facilitating information sharing and cooperation for joint assessments and shared decision making
- Identify the constraints of one's own roles, responsibilities and competence recognising the need for further training

Specialised post-qualifying KPIs for professionals working with clients requiring support and protection

- Work effectively with other agencies to review processes, effect change, improve standards, solve problems and strive to resolve conflict amongst professionals
- Work collaboratively to engage with team members who are not operating appropriately with public protection legislation. Appreciating differences and unilateral change in another profession
- Operationalise interdependent relationships, sharing information, alerting one another to changing client situations and developing trust

and respect for different professional expertise

- Work effectively across boundaries, facilitating positive experiences at interagency case conferences, meetings, and networking.
- Identify the need for specialised training, making recommendations for the content and scope of future interagency training

Conclusion

Firstly, gaps were identified in the working practices of police, health and social care professionals involved in adult support and protection. It became apparent that the lessons learned from child protection on how 'people and processes' were organised and implemented, should and could be applied to adult support and protection. However, it is acknowledged that the two are not comparable as 'information sharing' in child protection is less complex because the child is deemed not to be able to give consent. The challenges in adult support and protection are that the adult is deemed to have capacity so can refuse consent and the 2007 legislation is designed to target people meeting a specific criterion of 'adults at risk of harm'.

Secondly, the participants highlighted that the project's focus needed to be more comprehensive and move from 'adult protection' to the more generic 'public protection' and from multi-agency, multi-professional to inter-agency and interprofessional. This research was conducted during the introductory phase of Police Scotland in April 2013 and since then 'Risk and Concern Management Hubs' have been established in each Division. The hubs are responsible for collating 'concern reports' on adults at risk; child protection; hate crime and domestic abuse incidents. These reports are referred by the police to appropriate departments and relevant partners in health and social work.

The third important factor was that processes were practiced differently in different areas. This was of particular significance for reporting and referral where the appropriate process is for all agencies involved to submit reports. This should provide a clear demonstration of the multi-agency perspectives however there was an over reliance on the police to submit a report.

Another important recommendation is to build on the strong education and training foundations but to increase the emphasis on pre and post qualifying inter-agency training, as a requirement for all involved in public protection. Finally the KPIs related to those working in public protection have been identified and will serve to enable subsequent evaluation and monitoring of practice for all professionals involved in public protection.

Police-Muslim Relations: The nature and impact of airport experiences

Dr Leda Blackwood
University of St Andrews

The purpose of this research was knowledge exchange and to identify factors in the *generic* airport environment that may contribute to the experiences described by Muslims in the SIPR project conducted between 2009 and 2012, *Collective alienation and community support for authorities*. The initial piece of research identified airports (both in the UK and abroad) as one site where Muslims' experiences of interactions with authorities were contributing to a sense of 'us and them' with potential consequences for trust and cooperation¹. More specifically, key findings included:

- Frequency of stops within and across airports undermines confidence in authorities' ability to discern between 'good' and 'bad' Muslims; and in claims that ethnic and religious profiling is not occurring.
- Distress is associated with the public nature of being pulled aside; a sense of powerlessness to question or complain; and questioning that is seen as ill-conceived and disrespectful of Islam.
- Those who identified as British and saw themselves as respectable citizens, found the local airport experience as painful because it signalled a denial of these valued identities.
- Even those who were confident in their relations with authorities, and reported relatively benign experiences at airports, expressed doubts about the safety of interacting with authorities in high security contexts.
- People reported adjusting their travel behaviours (e.g. avoiding gaze and removing markers of Muslim identity) in order to avoid interactions with authorities and fellow travellers, and withholding assistance to authorities and other travellers.
- Treatment that was seen as illegitimate and meshing with a political narrative about Muslims as 'other' was viewed as undermining the credibility of community leaders who urge cooperation with police.

When the initial research was conducted, Scotland's police forces (now Police Scotland) were engaged in consultations with Muslim communities, and airports were emerging as an issue. Some effort had been made to address community concerns through local innovations at Glasgow and Edinburgh airports. The *Impakt* research reported here was conducted in response to an invitation from Edinburgh airport police and with the support of the Edinburgh airport cross-agency management committee.

The Research

Individual interviews and / or focus groups were conducted with senior and front-line personnel from each of the agencies at Edinburgh airport (police and intelligence officers, border force, security, and airline agency staff). Analysis of the data focused on identifying potential contributing factors to those themes identified in the initial phase of research conducted with Muslims.

There were many positives in the interviews. Senior staff viewed addressing Muslim community concerns as aligned with wider airport policy. Across agencies, front-line staff made favourable comments about the airport culture and efforts to ensure that all passengers have a positive experience. And many senior and front-line staff showed awareness and sympathy regarding Muslims' experiences of attention from authorities and from other members of the airport community (e.g., airport businesses and passengers).

Notwithstanding the positives, the focus of analysis was on factors that may contribute to Muslims'

perceptions and experiences. These are summarised below.

Multiple agencies and multiple stops. For police, a critical aspect of the airport context is the involvement of multiple agencies in processes of surveillance and scrutiny. From the perspective of front-line staff it was clear that differences in priorities, practices, and training entail different opportunities and constraints around engagement (e.g., purpose; time; potential for conflict) as well as different expectations and competencies in managing conflict.

Both from our own research and from the wider psychological literature we know that, particularly in stressful contexts, people may not readily distinguish between groups; and even where they do so, negative experiences can generalise leading to negative expectations with similar groups and / or similar locations². The problem of minority groups generalising negative experiences with other authorities to the police is potentially compounded in airports by the role of police in supporting other agencies in the management of difficult interactions.

Profiling and the decision to stop. Police officers were cognisant of 'official' policy regarding the illegitimacy of profiling on the basis of race, ethnicity, or religion alone. But some questioned the policy's practicality and perceived ambiguity around what is normatively understood to constitute legitimate profiling. There was also some indication that in a context where Muslims report self-conscious avoidance of attention, belief in police 'intuition' (e.g., relying on "*your usual criminal radar, that guy's looking shifty*") may further contribute to the frequency of stops.

Also identified were indirect and subtle biases associated with (a) reliance on Behaviour Detection Officers (BDOs) and assumptions about what they are looking for; and (b) the role of the police in inviting and responding to airport staff and passengers' identification of those who look suspect.

The nature of interactions. Across agencies and at all levels, good communication was considered vital and indeed people were proud of their communication skills. Communication was often judged to be successful, however, where an agency's immediate objectives were achieved (e.g., eliciting information and compliance) and not on how well the perspective and needs of the other had been accommodated.

Stress and time pressures associated with the nature of peoples' jobs and the environment; negative expectations of encounters with passengers; responding to other passengers and airport staff biases; and anxieties about complaints of prejudice; also emerged as potentially compromising interactions.

There was evidence of a shared normative belief that minority group members are less likely to ask questions or complain and this was understood as signalling satisfaction with treatment (rather than lack of confidence to do so). The corollary of this was that those who did ask questions or complain were described as "*having something to hide*" or "*playing the race card*" and so deserving of additional scrutiny.

Conclusion

This research has drawn attention to a number of structural and organizational features that we would expect to be common to airports, as well as psychological processes that may have both direct and indirect effects on Muslims' experiences in the generic airport context.

What this research cannot address is the actual nature of Muslim experiences at Edinburgh airport or more widely; nor can it address how policy and practice can and should be developed in specific contexts without compromising security. What it can address is what may contribute to the undermining of community relationships in this environment and so identify areas for intervention and further study.

Below are a number of learning points, some of which are already being addressed in Scotland's airports.

- Any efforts to improve the airport experience for Muslims and other minority groups will be enhanced to the extent that this is an agreed priority across airports and across agencies. This requires: making community relations a priority across agencies and levels within agencies and empowering front-line staff through knowledge, skills and organisation support; the development and sharing of training and best practice; and partnerships with other agencies that are contingent on shared values.
- Police efforts to address Muslim concerns will only be effective to the extent that underlying reasons for policy and principles of good practice are understood and regarded as legitimate. Areas for attention include: shared understanding about what constitutes legitimate profiling; ability to reflect on and challenge unconscious biases; understanding the implications of actions for members of minority communities; and awareness of one's own leadership role in the wider context – i.e. partner agencies, other passengers.
- Practices based on procedural justice principles of neutrality, voice, respect and sincerity are recognized as contributing to positive police-community relations³. Underpinning the effects of procedural justice, and of particular concern to stigmatised groups, is recognition of shared group membership and sensitivity to how other valued identities may be consequential for one's experiences as a group member. Practices should also be designed to (a) clearly communicate recognition of Muslims as valued citizens and differentiate from those who are a threat; (b) facilitate people's legitimate intentions such as catching a plane or protecting oneself from negative attention; and (c) acknowledge the collective nature of British Muslims experiences and provide 'collective' voice mechanisms.
- Police officers' ability to act in procedurally just ways is contingent on perceptions of procedural justice within their own organisation. This requires clarity about what is valued and rewarded (e.g., performance targets, promotion); and confidence in policy and procedures in regards to complaints.

Abertay University

The Cybersecurity Research Group at Abertay University has grown from the establishment of the UK's first degree course in Ethical Hacking, founded in 2006. From this small beginning, have been developed n Digital Forensics and Open Source Intelligence. Abertay University's research expertise has grown to include many other aspects of cybersecurity including usable security, database forensics, security visualisation, biometric, security anti-patterns, and hardware security. The group currently consists of 10 academics and seven PhD students and is aligned with Abertay University's *Security Research Theme*.

Recent research activities directly funded by SIPR have include two projects: RIO, to develop a means of monitoring the online activity of registered Internet sex offenders; and NICHDAApp, the creation of an App for mobile devices which acts as a guide through the NICHD structured interviewing technique for child victims of crime. This interviewing procedure has been recently advocated in the Evidence and Procedure Review by the Scottish Court Service (published in March 2015, Lord Carloway, Lady Dorrian, Craig Scott & Eric McQueen).

Project 1: RIO (Remote Internet Observation)

Police Scotland Offender Management Unit (D Division) and Dundee City Council Criminal Justice Social Work Services have a statutory responsibility for the management of registered sex offenders in Dundee. A growing number of these are Internet offenders who receive either custodial or community sentences following conviction. Management of offenders' Internet activities is currently conducted in one of two ways:

- 1) Offenders may be denied Internet access outright and thus accessing the Internet without approval would constitute a breach of order / licence and could result in a recall to prison; or
- 2) Offenders may be permitted Internet access on condition that electronic equipment is checked, and at present, this is done using Windows-based software, in the offender's own home.

Currently this Windows-based software can only be applied to a desktop PC or laptop computer. This software cannot monitor games consoles, tablets or smartphones. Locally, the Police Scotland Technical Support Unit could, in principle, carry out checks on this equipment but such checks would have to be prioritised in the context of ongoing criminal investigations. Therefore routine and pro-active monitoring of offenders' Internet activities requires on-site, physical access in the face of other operating pressures and is limited to specific classes of devices. To address this issue, we are currently developing a prototype of a physical device to enable remote monitoring of Internet traffic from all broadband enabled devices in a home. This project is in collaboration with Dundee City Council Criminal Justice Social Work Services and supported by the Police Scotland Offender Management Unit.

Our Approach

Using existing techniques for network monitoring in the work place, we are developing and evaluating a proof of concept device to replace the broadband or cable 'router' in the home of the individual under observation. This device provides secure logging of all Internet activity that is transparent to users, including offenders, while also preserving the confidentiality of, for example, banking transactions or client email contact with a legal representative.

Figure 1 - Off-the-shelf Router

Our device is based on a standard off-the-shelf router (Figure 1) which has been modified to provide the functionality described in Table 1.

Successful implementation of RIO will support practitioners in the remote observation of an offender's internet activity, from a range of devices in the home. Ultimately it will support the Police Offender Management Unit and Criminal Justice Social Work in meeting their duty to co-operate within the MAPPA framework and contribute to the protection of children and vulnerable adults.

Table 1 RIO Functionality

1. Route all Internet traffic through the device (including traffic from phones and tablets);
2. Log the web address (URL), timestamp and a <i>hash</i> (i.e. a unique digital signature) that can identify the content downloaded of each web request;
3. Detect and log when devices appear to have been used on other networks since they were last used on this network;
4. Log any attempts to disconnect or tamper with the device;
5. Send summary logs of the information gathered in steps 1 – 4 to a remote monitoring server (this small amount of data has little impact on the user's connection);
6. Record <i>all</i> Internet traffic on a securely encrypted local device, which would only be accessible by Police Scotland Offender Management Unit and Dundee Criminal Justice Services Public Protection team as deemed appropriate by the Parole Board for Scotland.

Project 2: NICHDAApp

The NICHDAApp project was based upon “computerising” the existing NICHD protocol¹ for child interviewing developed by Professor Michael Lamb and colleagues (including Dr David La Rooy at Abertay University). To date, the NICHD protocol is only available in a paper format which is sometimes perceived to interrupt the natural flow of communication and be distracting to the child victims.

The App version of the NICHD Protocol allows the interviewer to get to the right place in the interview with a single press of a button or a swipe on a mobile device such as the latest generation of Samsung phones. This helps interviewers navigate between the phases of the interview seamlessly – instantly

taking them to the appropriate section with no need to shuffle through paperwork during the forensic interview.

The development project has been successfully completed and the app is available as a free download from <http://cybersecurity.abertay.ac.uk/nichd/>.

It will shortly also be available via the Google App store.

It is hoped that its availability will benefit several stakeholders, but key amongst them are:

- Child victims – through improved child protection through the more successful prosecution of offenders;
- Police and forensic interviewers worldwide. Interviewers who use this system already have improved prosecution and convictions rates; the electronic version will make the approach more accessible and promote wider use due to improved usability;
- SIPR will benefit from the international profile; clear SIPR branding is included on the App.

SIPR and Social Media

In addition to its long-standing website presence on the internet (www.sipr.ac.uk) and its "SIPR Noticeboard" sent by email to c. 1,500 recipients on a monthly basis, during 2014 SIPR launched a Twitter account (@The SIPR) and a Facebook account (Scottish Institute for Policing Research). Early in 2015, the SIPR Blog was launched, under the direction of Professor Tara Fenwick and the Education and Leadership Network, with fortnightly postings from some leading figures in policing research. We look forward to developing this initiative during 2015.

Welcome to the website of the Scottish Institute for Policing Research (SIPR).

Welcome to the Scottish Institute for Policing Research (SIPR), a strategic collaboration between 12 of Scotland's universities and the Police Service of Scotland, offering a range of opportunities for conducting relevant, applicable research to help the police meet the challenges of the 21st century and for achieving international excellence for policing research in Scotland.

RECENT AND CURRENT PROJECTS The activities of SIPR are organized around three thematic networks. Please follow the links to view a range of research projects being carried out by SIPR members:

Police Community Relations - focusing on the relationships between police and different social, cultural and economic communities;

Evidence and Investigation - focusing on the role of the police in the recovery, interpretation and effective use of intelligence and evidence in the investigation of crime;

Education and Leadership - focusing on the internal dynamics of police organizations, including issues of management, policy and leadership.

SIPR Practitioner Fellowships

SIPR Practitioner Fellowships are aimed at all practitioner groups involved with the policing of Scotland, including police officers and police staff, those working on policing issues in central and local government, the business community and in the voluntary sector. They provide an opportunity for practitioners to work together with members of academic staff from the consortium universities on the practical and/or policy applications of a policing topic or issue. Academic staff provide guidance on issues of research design and methodology, including topics such as data collection and analysis, the relationship with other relevant research, and the writing up and presentation of the project. The outputs from this period of study might include a briefing paper for the police service, or a conference presentation co-authored with their academic supervisor. The following articles report on recent and current SIPR Practitioner Fellowships. More information on this initiative can be found at <http://www.sipr.ac.uk/research/fellow.php>

Photo: istock. Ross Deuchar (UWS) and Tony Bone (Police Scotland) organised a CPD event on “Assets-based approaches to youth crime prevention and community participation”

The impact of assets-based community integration initiatives in Scottish and Danish locations

Chief Inspector Tony Bone (*Police Scotland*) and Professor Ross Deuchar (*University of the West of Scotland*)

It has been argued that 'flourishing' communities can only emerge where there is open and deliberative dialogue involving individuals listening to each other, engaging in critical thinking and reasoned argument^{1,2}. The focus of this SIPR Practitioner Fellowship project was to explore and analyse the impact of implementing assets-based community networking initiatives on local public perceptions about youth violence, on the building of localized social capital and on the motivation and morale of local patrol and community officers in socially deprived communities in Copenhagen and Scotland. CI Bone and Professor Deuchar anticipated that a comparative study of similar initiatives in these two diverse settings could lead to important insights that could potentially stimulate important Nordic European policy implications for community policing. For a full Research Summary on this piece of work, see http://www.sipr.ac.uk/downloads/Research_Summaries/Research_Summary_20.pdf

Working closely with Danish Politi officers in the summer of 2014, semi-structured interviews were set up with 12 local residents (including three young people and five youth workers), four police officers and a local community worker (and former police officer) in Nørrebro, Copenhagen, during the implementation phase of a local 'community network'. Later, during an implementation period of community 'listening events' in Govan, Glasgow, semi-structured interviews were conducted with 16 people involved with the local community including six local residents, one local councillor, two youth workers, three local social entrepreneurs and four local community police officers. These events were led by the Licensing and Violence Reduction Division (LVRD) within Police Scotland but implemented in partnership with a range of local freelance artists, community-based third sector agencies and local residents.

Main Findings and Insights

Insights from the Community Network in Nørrebro, Copenhagen

Against the backdrop of a community which had become labelled in the media as a ghetto because of the presence of social housing and gang problems, it appeared that there was strong local animosity towards the police in Nørrebro. Certainly the area has been the site for several violent clashes over the years, most recently illustrated early in 2015 when police officers shot dead a gunman they believe was behind two deadly shootings in Nørrebro and who had a background in criminal gangs.

In the year prior to this research, a young community officer based in Nørrebro, Søren, had attended several international seminars where he was introduced to innovative violence prevention initiatives such as establishing community focus groups and 'listening events'. He returned from these trips inspired and decided to create a community network in Nørrebro.

The community network's membership comprised local social workers, members of School Boards, representatives from the Municipality, local residents and gang members and meetings took place monthly. Several large public meetings were also arranged, where local people had the opportunity to ask questions of a panel consisting of police officers, Municipality members, social workers, local volunteers and emergency services. Gang leaders were also in attendance.

By initiating open dialogue among diverse members of the local community, wider forms of *bonding* and *bridging* social capital emerged³, while localised trust was deepened between the participating young gang members and those with whom they were already familiar (such as social workers and some local volunteers), the meetings also enabled previously unconnected people and organisations to communicate and collaborate. Norms of support were expanded, socialisation networks widened and trust, reciprocity and social cohesion deepened.

A more sustained period of relative peace emerged between local rival gangs, and local residents began to realise that young people of all cultures needed to be consulted rather than negatively labelled and demonized. During the meetings of the community network, local residents, agency members, young people and police officers made fledgling attempts to orient towards shared objectives for future localised change and development³. However, although Søren was motivated and inspired by the impact of the community network and the pioneering collaboration and social capital which emerged within it, his other colleagues in the police were less than supportive. Søren was frequently told that the community-centred approach he used was seen as a 'soft' way of doing police work.

After a decade of working as a police officer, Søren left the force in order to take up a new post as an Operations Manager running the local 'People's House' where local people (including gang members) hang out together and where network

meetings and workshops take place, and a local café sells food and drink. Although the community network continued under the leadership of Søren's closest colleague, it lost some of the momentum it had had when Søren was in post.

Insights from Community Listening Events in Govan, Glasgow

Similar to the neighbourhood of Nørrebro, the data gathered from Scottish participants suggested that the neighbourhood of Govan was one which had also suffered for many years from unemployment and social deprivation. It had also been home to territorial gangs. Consequently, the long-held traditions of previously celebrated occasions like the Govan Fair had been blighted by conflict between local gangs looking for a stage to display their combative skills.

Set against this backdrop, an opportunity arose to apply the principles of the Strengths Based Approach (or Assets Based Approach) to community development in the Govan area. Not without its difficulties, the success of this approach relies on true empowerment of residents and community groups while significantly adjusting the mindsets of service providers to create an equilibrium of understanding. The importance of the 'Govan Fair' as a potential conduit for lasting change became crystal clear. Here was an opportunity to galvanise extensive community support that might just be quite transformational.

Significant control for the planning of events was handed over by the local police to the residents' 'Govan Fair' committee. Instead of flooding the local area with high visibility police officers, local people were given vests and trained on the art of crowd control and traffic management. According to local residents, a kind of positive contagion appeared to spread before, during, and after the fair and procession which resulted in a completely different type of event from the one experienced over the last few years. The atmosphere was safe, happy and family-friendly, and real sense of pride and achievement began to spread. Significantly, reported violent crime was virtually non-existent throughout the 'Govan Fair' celebrations, and local fear and anxiety about youth disorder also diminished.

Running in tandem with this collaborative police and community approach on the Govan Fair was the 'We are Listening' initiative sponsored by Creative Scotland. This involved permission from the local area commander to site three artists in residence within the local Govan Police Office. Once an element of trust was established they were given free rein to visit the internal environs of the station. Once officers and local residents realised there was significant commonality between them, a sense of togetherness emerged. This simple step began to raise morale, trust and confidence. Residents commented on a new 'feel-good' factor, reportedly due to a perception that community police officers were genuinely listening.

Conclusions

The success of the assets-based community networking initiatives in both Nørrebro and Govan illustrates that local feelings of fear and anxiety about youth crime and violence can only be resolved through a holistic, multi-agency approach with an emphasis on crime prevention and the building of local cohesion and reciprocity.

Across Nordic Europe, there is a need for the police to learn from case studies such as the ones emerging from this research. Groups of officers who are highly committed to encouraging community integration and promoting localized assets should be able to gain affirmation and motivation from within their organization, and believe that their ongoing efforts will be legitimately viewed as 'real' police work. Finally, officers need to ensure that localised trust and cohesion is sustained by continually placing local people at the heart of local decision-making processes.

The introduction of Assets Based Community Policing has inspired a new phase of face-to-face engagement between local people and my community police officers. Instead of recognising residents for all the negative reasons, my officers are now more aware of what's positive about Govan. Similarly, local people are now beginning to see local police officers as a friendly face in the community.

We welcomed our three new 'Artist in Residence' friends with open arms into the police office where they had free rein to engage with officers. This enhanced morale and introduced creative opportunities around diversity of personal awareness. However, most importantly, in collaboration with the people of Govan we have created a safer and more positive environment where people can truly make a difference.

Inspector John Haynes,
Community Policing, Govan Police Office

Applying an Asset-Based Approach

Inspector Keith Jack (Violence Reduction Unit, Police Scotland); Dr Liz Frondigoun (Glasgow Caledonian University); Professor Rob Smith (University of the West Scotland)

The Violence Reduction Unit (VRU) have adopted an asset-based approach in a small community in central Scotland. It is a community that falls into the lowest 5% of the SIMD, and had complex social and criminal problems, particularly anti-social behaviour. While it didn't have particularly high levels of violence or criminality it was an area which was scourged by poverty, deprivation, anti-social behaviour and a number of known criminals/ex-criminals who lived within it.

The project and work reported on here is led by Inspector Keith Jack of the Violence Reduction Unit. Dr Liz Frondigoun and Professor Rob Smith are Keith's supervisors for his SIPR Practitioner Fellowship and they have visited the project and conducted interviews both formally and informally with the residents on a number of occasions over the last 2 years.

The Scottish Government aspires to deliver a 'Scotland that is a better, fairer and more prosperous place for us all to live and work'¹ in. Furthermore, the Christie Commission had identified that in order for effective service provision to be delivered it has to 'be designed with and for the people and communities'² in order to deliver a Scotland where we can 'live our lives safe from crime, disorder and anger and where our public services are high quality, continually improving, efficient and responsive to local people's needs. Our People and communities support and respect each other, exercising both their rights and responsibilities.'³ It is an ambitious plan and has implications for all public service providers which it is perceived will require doing things differently and in particular adopting more inter-agency working.

Asset-based approaches are characterised as being:

“

*...an integral part of community development in the sense that they are concerned with facilitating people and communities to come together to achieve positive change using their own knowledge, skills and lived experience of the issues they encounter in their own lives. They recognise that positive health and social outcomes will not be achieved by maintaining a 'doing to' culture and respect that meaningful social change will only occur when people and communities have the opportunities and facility to control and manage their own futures. In community development terms, assets based approaches recognise and build on a combination of the human, social and physical capital that exists within local communities.*⁴

The study aimed to identify what the key characteristics of an asset-based approach are for this community; to make it a safer and more vibrant and sustainable environment in which to live and work; and to assess the outcomes thus far. It includes the voice of some of its residents on how the asset-based approach has impacted on their community and what they, the community, perceive as their next steps.

It is argued that while this approach has been found to be successful in this pilot and in other multi-agency projects (for example see the Connecting Communities (C2) programme⁵), it is also recognised that it will not necessarily be so for all communities. The key elements that are believed to be crucial to the successful adoption of an asset-based approach are:

- Is it the right community?
- Are the issues it faces ones that can be addressed by a community asset-based approach?
- Is there support (buy-in) from other service providers?
- Does the community have the prerequisite assets, including people to facilitate it?

Encouraging change to happen

This was a fractured community that did have the above pre-requisites and in particular it also had a Community Centre which was being under-utilized. *"We the local residents were not welcome there...some local residents were banned from using the centre"* which it is perceived was because of the negative image which the local area had.

The first and most crucial step in making such a change at the community level was that of enlisting the support, and perhaps more importantly the trust, of the local community. The asset-based approach requires communities to be active members in a bottom-up model rather than the more traditional approach to troubled and troublesome communities which is top-down. Therefore it is important to take "an honest" approach and let the community know why the VRU are there, what they want to do, and how they are going to go about it. It is crucial to be able to bring the people in and get them to work on their own problems. One of the key areas where there is often a local deficit is that in many deprived and socially excluded communities residents don't know how to access services or to let their community concerns and desires be known. Adopting

an asset-based approach allows for these communities to discuss their problems, identify their needs, and then initially to get the relevant support to encourage them to take responsibility for making the changes they desire.

The asset-based approach is about empowering local communities to be active in shaping their own community. Therefore it is not a quick fix but more likely to be a process of change with the ultimate goal of the community taking responsibility and making decisions for itself and its residents.

Making change happen

The area has been transformed over the last 2-3 years and is now a thriving hub for the local community. They run a Man-up Group, the members of which meet weekly helping each other to deal with troubled pasts and to regain self-confidence, self-esteem, skills and to support each other on their journey. They now have an established community garden where they grow vegetables and keep chickens. They have also organised themselves and now offer a service to the local community to maintain gardens of those residents who are unable to do so themselves. There is a small charge for this services (£5) which is used to maintain the machinery, lawnmowers, barrows, etc.

There is also a lively women's group who are planning to provide a Community Shop service on a Thursday. They are negotiating with a food supplier to take the 'ugly vegetables'⁶ and to sell them in the

community centre. They have also started a 'walking bus' to take the children from the community to and from school. They arrive at the school around 8.30, where the children are provided with a breakfast. After school they are met at the school and walked back to the community centre where they have a 45 minute homework group, a quick snack, and then 45 minutes of games. This offers instant benefits around health and fitness and supporting those with difficulties in getting their children to school (it costs c. £6 per day for a taxi) but in the longer term it is hoped that improvements in educational attainment will be seen.

The children, along with the women's group, make Christmas cards and calendars which they deliver to the elderly in the community. At the same time they encourage some of Hawkhill's most vulnerable people to take up the offer of fire safety checks (50 carried out last Christmas). This simple initiative promotes community safety through people speaking and getting to know each other. There is a vibrant youth club. The local school is also planning to work with the community centre on a summer project to get the children growing and maintaining vegetables - *'...aye, if the children are growing them then it might encourage them to eat vegetables...if I grew that maybe I should taste it...eh'.*

Overall the perception of the residents is that since the VRU arrived and helped them to develop through an asset-based approach there has been *'a massive difference'*. *'Young people in the area now have role models'*. *'We have a welcoming friendly environment'*. *'We are more self-confident and more confident about the future.'* *'We would like to think... that if the VRU were to leave this would continue - we know how to do things now.'* *'The time might not be right yet, but we are a lot further forward than we were before they came.'*

The researchers' observations would echo those of the residents in that there is a welcoming and vibrant buzz around the project. Some residents use it every day, and over the 2 year period it was evident that some of the residents are now much more confident about the future of the community.

Knowledge transfer in action: crime reduction through a regulatory approach

James Royan *Chief Inspector, Police Scotland*
John E. Eck *Professor, University of Cincinnati*

In April 2013, the Centre for Evidence Based Crime Policy (CEBCP) and the Scottish Institute of Policing Research (SIPR) assembled academics and practitioners from the United States and Scotland at George Mason University to promote the transfer of knowledge of evidence based practices. In October, 2014 SIPR and CEBCP held a second meeting at the Scottish Police College, outside Edinburgh.

This paper is the result of a fortuitous meeting of the authors. At the first meeting, Eck spoke about regulating crime places, based on a paper 'Crime Place and Pollution' (Eck & Eck, 2012) which argues that crime is concentrated on places because some places create crime opportunities. Unless the opportunities that create 'hot' places are rectified, these addresses will stay 'hot'. Although many believe it is enough to go after the offender, a regulatory approach suggests that this belief facilitates further crime. Arresting and prosecuting offenders serves justice, but leaves the opportunities for crime untouched, so more crimes occur. A regulatory approach addresses the opportunities for further crime. That paper used the Ritz Nightclub as an example. At the second meeting, Royan spoke about his application of a regulatory approach to places within his command area. Because their work illustrates the utility of both police-researcher and international exchanges, CEBCP and SIPR asked Royan and Eck to describe it. In this article, they illustrate the utility of practitioner-researcher information exchange by focusing on the direct application of a theory.

Introduction and context

Two murders, 5994 kilometres (3724 miles) and 45 months apart, illustrate the value of police-researcher exchange of information. The first occurred in 2010 at the Ritz Nightclub, in Cincinnati, USA. The victim was shot. The nightclub had a history of trouble with the police, including numerous violent events. The second killing occurred in 2013, at the Rowantree Inn, outside Dalkeith, Scotland. The victim was stabbed. This place too had a history of violence and other troubles. Both events illustrate the utility of taking a regulatory approach to crime prevention.

Licensing Developments – Midlothian

On 26th November 2012, Royan was appointed the Local Area Commander for Midlothian. He identified alcohol related violence and anti-social behaviour as a priority, and began exploring partnerships which could help reduce these problems. He identified two specific concerns:

- The Licensing Act 2005, placed a duty on all Local Licensing Boards to have a 'Licensing Policy Statement' containing an overprovision assessment. Midlothian's Local Licensing Board had neither a 'Policy Statement' nor an 'Overprovision Assessment'.
- The Act provides for the creation of Local Licensing Forums who should review the operation of the act and to give advice and make recommendations to the Board. The Midlothian Council had a Forum but it was administered within the Licensing section of the Council, which limited its independence from the Board.

To rectify issue 1, Royan suggested to the Clerk of the Licensing Board, and it was agreed, that the Community Safety Partnership Analyst would prepare an alcohol profile for Midlothian, which would allow

the Board to develop a Policy Statement, containing an overprovision assessment.

In response to issue 2, Royan requested that the administration of the Local Licensing Forum be moved from the Licensing Department to the Safer Communities Team. This increased community representation at the Forum, and gave the Forum greater independence. Thus, the Forum became the key driver for creating the overprovision assessment and making recommendations to the Board. Simultaneously, Forum membership was increased and widened to include greater representation from the community and licensed trade. This fostered effective working relationships between the Police and partners, specifically the licensed trade.

Case Study – The Rowantree Inn, Mayfield, Midlothian

This was the background when a culpable homicide of a 28 year old male outside the Rowantree Inn occurred on the 24th November 2013.

The Place The Rowantree Inn is a licensed premise within one of the many residential communities of Midlothian. Between October 2010 and November 2011 there were 17 separate incidents on the premises requiring police intervention, including four disturbances involving multiple individuals; eight assaults and five other miscellaneous licensing offences, including patrons refusing to leave the premises and selling alcohol to underage patrons.

As a consequence, police asked the Local Licensing Board to review the premises' operating plan. The police supported this request with documentary evidence, oral testimony, and CCTV footage. The Board upheld the grounds for the review and reduced the Rowantree's operating hours by one hour. The Rowantree Inn did not come to the attention of the

police for any significant incident until 24th November 2013.

The Incident At 2341 hours, the police received an emergency call reporting a male entering the Rowantree with a knife. He threatened the barmaid, his ex-partner. A second male intervened and with a group of other patrons ushered the first male out, into the adjacent carpark. Within the carpark, the disturbance resumed, and the first male fatally stabbed the second male. A full criminal investigation ensued and the male responsible was convicted of culpable homicide and is currently serving a custodial sentence.

Licensing Interventions To prevent further violence, Royan considered the Alcohol Licensing Toolkit, sought advice and support from the National Licensing and Violence Reduction Policy Unit and considered the contents of 'Crime Place and Pollution' when developing his community impact assessment. From the 24th to the 29th November 2013 the premises was a crime scene and police locked it down for forensic examination. On the 29th November 2013, the police were ready to hand the premises back to the owners.

Royan identified a significant risk in the premises being handed back on a Friday with all likelihood that it would re-open over the weekend. Community tensions were running exceptionally high following the incident, particularly between the two families involved and the Rowantree was a potential scene of more trouble.

Mindful of the limitations of an emergency closure, Royan considered other options. Through involvement in the Local Licensing Forum, Police Scotland had developed an enhanced working relationship with Midlothian's Licensed Trade. Exploiting these positive working relationships, Royan invited the Premises Manager of the Rowantree Inn to a meeting. At this meeting the police informed the manager that the property would be returned to him. However, a licensing investigation still had to examine any malpractice. Since community tensions were still high, Royan asked the premises manager if he would agree to close the premises until the 16th December on a voluntary basis. This would allow for: a full licensing investigation; community tensions to subside; and, a formal application for a closure order to be made to Midlothian Local Licensing Board.

The premises manager agreed and the premises closed immediately on a voluntary basis. This agreement was facilitated by the positive working relationships developed among the licensed trade, Licensing Forum, and police.

On 13th December 2013, an application was made for a formal Closure Order. This was granted until the Local Licensing Board could hear from the police of their review and suggestions for the premises operating plan. This was only the second formal closure order to be granted within Scotland under this legislation. A month later, the Board upheld the

reasons for the review and agreed to a full implementation of the conditions requested by the police. These were that the Premises Licence Holder should:

- Be present on the Rowantree at all times that it is open.
- Hire stewards to be on duty between 9pm and close of business every Friday and Saturday.
- Pay for an independent review of stewarding needs, to the satisfaction of the police.
- Remove indoor and outdoor sports.
- Keep an up-to-date incident book.

The premises were only permitted to re-open after the review of stewarding was undertaken. After re-opening, the police conducted regular visits and inspections to ensure all conditions were being adhered to. By this time, community tensions had gone down.

Conclusion

This case study deftly combined three dimensions of regulation. The first is the government: here the police and Local Licensing Board. The second is "self-regulation", and involves the organization or industry imposing rules upon themselves: here the premise owner and representatives of the license trade. The third is community-based regulation: here the expanded Local Licensing Forum (Grabosky, 2011). This case also illustrates the interconnectedness of a problem-oriented approach and regulation (Sparrow, 2000). Finally, it shows that although theory based on evidence is useful, practitioners must artfully apply the general principles to local problems.

Eck and Eck suggest that place management practices are in part responsible for high crime and place managers can reduce the crime in their respective place. To achieve this, a regulatory approach can be useful. Through the application of specific legislation the police and partners can apply regulatory control over problematic premises. Finally, by requiring an independent review of stewarding, at the premises manager's expense, the burden of responsibility shifts towards place managers reducing crime.

Innovations in policing domestic abuse

Frazer McFadyen, *Police Scotland* &
Michele Burman, *University of Glasgow*

Domestic abuse is a pervasive social problem with wide-ranging adverse effects on victims and their families. It can include a range of behaviour and actions by an abuser that can cause physical, sexual and/or emotional harm; it is rarely a one-off discrete incident and more likely a pattern of persistent behaviour by a partner or ex-partner which gets worse over time. In the majority of cases, domestic abuse is experienced by women and children and is perpetrated by men.

Because of its chronic and often hidden nature tackling domestic abuse is a priority for Police Scotland. For this SIPR Practitioner Fellowship, PC Frazer McFadyen, from the Licensing and Violence Reduction Force Flexible Policing Unit in Forth Valley, was mentored by Professor Michele Burman, University of Glasgow and Scottish Centre for Crime and Justice Research.

Police Scotland have developed clear guidelines on policing models and procedures and work to a nationally agreed definition of domestic abuse which has been adopted by the Crown Office Procurator Fiscal Service (COPFS):

“Any form of physical, sexual or mental and emotional abuse which might amount to criminal conduct and which takes place within the context of a relationship. The relationship will be between partners (married, co-habiting, civil partnership or otherwise) or ex-partners. The abuse can be committed in the home or elsewhere.¹

There is currently no specific offence of domestic abuse in Scotland. Rather, domestic abuse incidents are those recorded by the police using the above definition of domestic abuse, and hence include crimes of violence (both non-sexual and sexual), and other crimes such as breach of the peace, threats, and vandalism.

Although recorded crime in Scotland has largely reduced over recent years, the number of domestic abuse incidents steadily increased in the ten years from 2003 (Figure 1). This demonstrates the need for a focused and consistent approach to both victims and perpetrators.

Figure 1. Domestic calls recorded by Scottish Police, 2003-2013. (Scottish Government, 2013)

Trends in recording Domestic Abuse

Understanding of the nature of domestic abuse has improved since seminal work looking at the impact of arrest on reoffending, where the majority of abuse was spousal². Over the past ten years, although there has been an increase in recorded incidents of domestic abuse in Scotland, the increase in calls to police relates primarily to recidivist offenders.

Trends have been identified such as a rise in domestic incidents reported by women aged between 26 – 30yrs and 41 – 50yrs. The majority of the abuse is committed by partners / ex partners in the victim's home, with repeat offending increasing annually.

Over the past ten years, the number of new cases of domestic abuse being reported has remained relatively steady whereas the number of repeat victims that have contacted police has increased in line with the total figure (Figure 2). This would suggest that the methods currently used to tackle domestic abuse are not targeting these repeat perpetrators, and are therefore failing victims.

Figure 2. Repeat victimisation recorded by Scottish Police, 2003-2013. (Scottish Government, 2013)

The Fellowship

This Fellowship looks at the role of front line police officers in responding to domestic abuse. It aims to identify strengths and weaknesses of the current policy and practice. It also seeks to provide an overview of promising practices from elsewhere that have been adopted in the policing of domestic abuse, and considers their applicability to the Scottish setting.

Police Powers

In their response to domestic abuse, Police Scotland and COPFS have agreed a pro-arrest policy whereby perpetrators of domestic abuse will be arrested regardless of support from the victim, providing there is a sufficiency of evidence¹. This policy allows one procedural route for officers who are dealing with incidents of domestic abuse; that the perpetrator is arrested and the case sent to the Procurator Fiscal.

As a result victims may not always contact the police if they know it will lead to criminal proceedings, and so either tolerate the abuse or seek support elsewhere. Furthermore, perpetrators who understand this procedure can potentially make malicious complaints knowing the victim will be detained, which can extend their control over victims and vindicate their abusive behaviour³.

This response has an impact both on the way that police officers deal with each situation and on victim's perceptions of the service provided; when officers attend a situation they are duty bound to investigate every alleged crime and this can result in dual arrests/detentions. Research has shown that although male perpetrators are more common, per incident women were three times more likely to be arrested⁴. This can potentially lead to cases of injustice where victims are arrested under laws in place to prosecute perpetrators.

Recent legal developments that have been put in place to counteract the problems raised by this reactive approach, such as the use of Domestic Violence Protection Notices, or perpetrator programmes, will be explored as an alternative to this pro arrest policy.

Victim Support and Advocacy

The provision of appropriate support is key in responding to domestic abuse, as without support of the victim it is far more difficult to collate available evidence or progress any case in court. The likely outcome is that the perpetrator will not be held to account for their actions and continue their abusive behaviour⁵.

Although Police Scotland state victims will be supported based on their individual needs, research indicates that the response given is not based on the needs of the individual, but rather on the organisation⁵. For example the DASH questions asked by the police to victims (used to gauge the level of risk) are always the same, regardless of how domestic abuse may manifest within different communities⁵.

The applicability of Victim Advocacy schemes in domestic abuse cases will be explored with the aim of understanding how advocacy works in domestic abuse circumstances, and its limitations. As part of this, it will draw on recent research on independent advisors who work closely with the police and other criminal justice partners in the support of those who experience domestic abuse.

SIPR Visiting Overseas Fellow

Investigating the reasons for and impact of police reform in Scotland

Garth den Heyer, New Zealand Police

Dr Garth den Heyer is a Chief Inspector with the New Zealand Police and a Senior Research Fellow with the Police Foundation in Washington DC and lecturer in investigation management and leadership with the Australian Graduate School of Policing and Security/Charles Sturt University in Sydney, Australia. Dr den Heyer had a two and a half month Police Foundation fellowship with SIPR during which he undertook a study of police reform.

Context

The study took a cross-sectional approach by interviewing and surveying serving and former police officers and other governmental officials from Scotland who had been involved in the reform in an official capacity. Twenty-five serving and former police officers and government officials were contacted to obtain their permission to be included in a semi-structured interview for this research. Twelve officers and officials agreed to be involved in the research, of which seven were serving police officers and five were government officials. The interview phase of the research took place between mid-July and mid-August 2014.

Why was a merger of police forces adopted? What were the main drivers?

All twelve participants noted that the eight forces had performed well, and, as one participant claimed “in some cases, at the top of their game”. According to the participants, public confidence in the Police throughout Scotland was evidence of the high level of performance by the eight police forces.

Only four of the twelve participants initially agreed with the single force concept, while six participants expressed that they had preferred the eight force or status quo model, while two favoured the regionalization model.

All of the twelve participants noted that the main goal of the reform was to save money and that the main driver for the single force option was for the Scottish Government to ensure that the same level of police service could be maintained in the future with a decreasing level of funding. One participant also identified that the establishment of the single police service was the start of a wider Scottish public sector reform programme and if the reform of the police was successful, the approach may be used in other sectors. Another participant believed that the merger was about ensuring sustainability in the police service and that the establishment of a single national police force was inevitable. As noted by one participant, the single force option was the only way to drive police service delivery efficiency and effectiveness.

What is the evidence for any change in the efficiency and effectiveness of the delivery of services by the new Police Service of Scotland?

A number of questions were used to answer this research question. The first question asked participants to identify the major challenges in implementing a single force. Six of the participants believed that there were three major challenges to the implementation of the single force: the different cultures of the eight forces; the scale, complexity and the timeline of the reform; and being able to retain local support for the Police.

Five of the twelve interview participants said that the reform had been successful, especially as far as the public were concerned. According to four of these five participants, the public did not notice any difference in how police services were delivered, and how the Police responded to emergency calls and requests for assistance from the public from day one of the merger. Five of the participants felt that policing in Scotland had improved as a result of the establishment of the single force. An improvement could be seen from the deployment of specialist officers to assist other police localities with operations and the capability of Police Scotland to investigate sexual offending historic/cold cases.

Participants were also asked which elements of service have improved since the establishment of Police Scotland. Two of the elements of improvement that were identified by most of the participants were the budgetary savings that had been made and the improvement in the accountability of Police by the establishment of the Scottish Police Authority and Scottish Police Investigations and Review Commissioner, and from the increase in the audit responsibility of HMICS.

The final question asked what was the greatest challenge facing Police Scotland. The most frequently cited challenge for the future was the level of funding for Police Scotland and whether the current level of service could be delivered if further funding cuts were imposed.

Commissioned Research and Knowledge Exchange undertaken by SIPR

SIPR works closely with Police Scotland, the Scottish Police Authority, HM Inspectorate of Constabulary and Scottish Government to support the commissioning of research and knowledge exchange. This creates a wide range of opportunities for members of SIPR to engage in new, relevant projects that contribute to innovative and evidence-based policing approaches. Projects taken forward in 2014 include:

- The Scottish Police and Citizen Engagement Project
- The Scottish Community Engagement Trial
- An evaluation of the Rape Advocacy Project
- An evaluation of the Fife Police Division Stop and Search pilot
- A study of organisational culture and collaborative working on the Scottish Crime Campus;
- Support for a series of seminars as part of the Scottish Police Authority's Strategic Development Programme
- Research contributions to HM Inspectorate of Constabulary work on missing persons and multiagency protection arrangements in relation to sex offenders.

Reports on some of these projects are provided in this section.

The Scottish Police and Citizen Engagement (S.P.A.C.E.) Project

Dr Annette Robertson (Annette.Robertson@gcu.ac.uk), Professor Lesley McMillan and Professor Jon Godwin (Glasgow Caledonian University) and Professor Ross Deuchar (University of the West of Scotland)

The Scottish Police and Citizen Engagement Trial, jointly funded by the Scottish Government and SIPR, tested the impact of introducing procedural justice training to probationers at the Scottish Police College (SPC). The Project drew on a wide range of research on procedural justice and policing (for a comprehensive overview see Mazerolle, Bennett, Davis, Sargeant and Manning, 2013), and was modelled on the Chicago Quality Interaction Training Programme (Schuck and Rosenbaum, 2011; Rosenbaum and Lawrence, 2013). The hypothesis underpinning the SPACE Project was that probationers who were exposed to focused procedural justice training as part of their standard police training course would exhibit enhanced awareness of the significance of this framework to policing, and consequently place greater value on positive engagement with the public. This would be demonstrated through measurements of probationers' attitudes, perceptions, and behavioural intentions using key procedural justice indicators: fairness/neutrality/impartiality; respect; trust; participation/voice; and communication. For more details on the background to the project, see the SIPR Annual Report for 2013, p.16.

Methods

The project took the form of a cohort trial, to which a total of 159 participants were recruited; 64 to the control group (who did not receive any focused procedural justice training) and 95 to the intervention group (who did receive additional inputs on the procedural justice approach). Participants were assessed using a main survey conducted at the start and end of their 12-week training programmes, as well as additional scenario surveys, observations of role-playing exercises, and focus groups, to test for the effect of the additional training.

Trial Results

Main Survey

A comparison of the main survey conducted at the start and end of the trial revealed measurable, and in some cases, significant differences between the intervention and control groups. Statistically-significant differences were found for 'communication' and 'respect' measures:

- Four out of eight communication measures changed in a positive direction over the course of the project, all of which were for the intervention group, suggesting the additional training had a positive impact.
- Two out of four 'respect' measures changed over the course of the project, both in a negative direction; one applied to both the control and intervention groups, and the other to the intervention group alone. This indicates potential issues with both the routine training programme and the additional SPACE inputs, which warrant further investigation/research.

Further differences were found between the control and intervention groups for other questions measuring 'communication', 'respect', and for some measuring 'trust', 'impartiality' and 'voice', but these were not statistically-significant.

Additional Scenario Surveys

Three additional scenario surveys showed that neither the intervention nor the control group demonstrated an overall greater or lesser awareness of procedural justice issues, and their general attitudes, perceptions and behavioural intentions were similar in many respects. However, qualitative data collected from both groups suggested that the context of encounters was significant for some:

- When dealing with an offender (for example in a traffic stop), there was a tendency towards reporting the use of procedures as a means to an end (processing an offender) rather than demonstrating procedurally-just approaches.
- When dealing with young people, greater focus appeared to be placed on communication and dialogue, and constructive engagement, which was a positive outcome.
- When dealing with victims of crime, there were mixed views about whether it was appropriate to apologise, empathise, or sympathise with victims, suggesting greater clarity was required in training.

Role-Play Observations

All probationers involved in the trial were observed participating in role-play exercises. The results demonstrated a consistent pattern whereby members of the intervention group were more likely to score 'good' than the control group, who were more likely to score 'fair/average' across a range of measures (*verbal communication, empathy/sympathy; active listening; professional intentions/motives*). Although the results suggested SPACE training did improve probationers' performance, these results were not statistically-significant.

Focus Groups

The focus groups explored, among other factors, views on procedural justice and the challenges of upholding values. Officers demonstrated awareness of the need for positive engagement with members of the public and recognised the importance of drawing on key principles reflected in the procedural justice approach and Police Scotland's guiding values to develop trust and positive relations with communities. However, different motivations were expressed for this, which could be characterised as more pragmatic for the intervention group and more intrinsic for the control group.

Evaluation

A final evaluation of probationers in the intervention group at the end of the SPACE trial revealed that knowledge of procedural justice increased over the course of the project considerably: by the end of training 18% of probationers reported their knowledge as high, 68% as medium and 14% as low, compared with 3% who said high, 25% medium and 72% low at the start of the project, clearly demonstrating training impact.

Knowledge of the key skills and approaches related to procedural justice also improved in several areas, with high percentages reporting a better understanding of:

- The use of empathy in police work (83%)
- The role of active listening in police work (80%)
- What police legitimacy is and why it is important (78%)
- How procedural justice approaches can help develop positive relationships with young people (69%)
- What procedural justice is and how it applies to general policing (66%)
- How procedural justice approaches might be particularly pertinent when dealing with victims of sensitive crimes (64%)

When reporting behavioural intentions related to the SPACE inputs generally:

- 28% reported it was likely or very likely that they would use the knowledge and skills covered in their work as a police officer, compared to 39% who said it was unlikely or not very likely.
- 9% reported that they thought the additional training would make a difference to the way they did their job, compared with 57% who reported it would make little to no difference.

These outcomes are concerning as they indicate probationers' lack of intention to translate their self-reported knowledge into action, however some probationers did highlight areas where SPACE training would help in how they did their job, including active listening, engaging with young people; effective communication; and empathy. There was a tendency by some to dismiss the procedural justice approach as 'common sense', and therefore to perceive any specific focus on it as 'not core policing' and even a 'distraction' from 'real' police training. This suggested that some participants were not open to engagement and therefore unlikely to have their perceptions, beliefs and attitudes challenged.

Conclusions

The general survey results were relatively favourable over a range of measures for both control and intervention groups, which suggests there were no serious underlying attitudinal issues. This also indicates that current recruitment methods are, for the most part, fit for purpose and recruiting individuals into police training who are likely to have a reasonable capacity to enact the principles of procedural justice.

The results suggest that both the standard probationer training programme and the additional SPACE training inputs had an impact on probationers' perceptions and attitudes that were positive in the most part. The additional training also had a significant positive effect on communication, which is particularly important as communication is vital for modern day police work and a fundamental component of procedural justice.

More generally there was evidence of a more procedure-driven approach, perhaps at the expense of procedurally-just approaches, although the two are not mutually exclusive and both would, ideally, be given appropriate consideration.

Police Scotland recognises the importance of positive and professional engagement with members of the public in maintaining confidence in both the police service and the broader justice system. In this regard we constantly review and refine our training to ensure that officers are properly equipped to carry out public contact duties. The SPACE Project, using procedural justice theories, allowed us to test the underlying attitudes of our recruits and the efficacy of our existing training programmes. The trial produced some interesting results, which we are currently considering, and these results will no doubt influence the direction of future training at the Scottish Police College.

Chief Superintendent Grant Manders, Police Scotland

The Scottish Community Engagement Trail (ScotCET)

Sarah MacQueen (*University of Edinburgh*) and Ben Bradford (*University of Oxford*)

The Scottish Community Engagement Trial (ScotCET), funded by SIPR and the Scottish Government, was initially conceived as a replication of the Queensland Community Engagement Trail (QCET). QCET used a large-scale randomized field trial methodology to test the effect of police using the principles of procedural justice during routine encounters with citizens. The trial found that the quality of interaction between public and police during random breath testing operations had a direct positive effect on: satisfaction of members of the public with the process and outcome of the encounter; perceptions of police fairness; respect for the police; trust and confidence in the police; and self-reported willingness to comply with police directives (Mazerolle et al, 2012; Mazerolle et al, 2011). Crucially, implementing and adhering to core elements of the procedural justice model developed by Tyler (2006) through treating individuals with dignity and respect, inviting citizen participation, and providing clear explanation during encounters was what led to these positive outcomes. As such, QCET makes an important contribution to an expanding evidence base that supports the importance of procedural justice and, through the application of robust experimental methods, was the first study to demonstrate the causal link between the implementation of procedurally just forms of policing, and the formation of public opinion and conferment of legitimacy.

ScotCET was funded by the Scottish Government in 2013 to address growing policy concerns around public trust and confidence in the criminal justice system and the relative dearth of robust, Scottish-based evidence available to inform policy and strategic development. Through replication, the relationships observed in QCET could be tested within a Scottish context and provide findings to inform the development of the Reassuring the Public programme and the wider Justice Strategy for Scotland.

Design

Critical legislative and operational differences between Australia and Scotland meant a direct replication of QCET was not possible. Thus, whilst the broad context of road policing was retained, an adapted experimental design was developed in partnership with a range of active road police officers working across Scotland. All 20 road police units participated in the final experiment, which took place during the Festive Road Safety Campaign 2013-14 to ensure a high volume of broadly uniform roadside encounters, based around the common theme of winter safety and prevention of drink-driving. Prior to the campaign, units had been randomly assigned to experiment or control conditions.

Following a baseline period of one week, during which all officers conducted 'business as usual' with the addition of distributing questionnaires to drivers, half of the units began operating under experimental conditions, delivering a set of key messages during encounters and distributing a leaflet designed to enhance perceptions of procedural justice. The introduction of the key messages was to introduce a level of consistency to encounters such that each included *all* of the core elements of the procedural justice model, whilst allowing officers to protect their responsivity to individual drivers and maintain a natural style of interaction. The leaflet was designed to reinforce the key messages and 'collective' nature of the campaign. The remaining units continued to operate business as usual.

Hypotheses

The overarching hypothesis for ScotCET was that the positive findings from the original QCET would be replicated. The analyses undertaken sought to test the relationships shown in the conceptual map in Figure 1 and, in essence, examine whether receiving the experimental intervention shifted perceptions of procedural justice, and levels of satisfaction, trust and confidence and legitimacy in a positive direction.

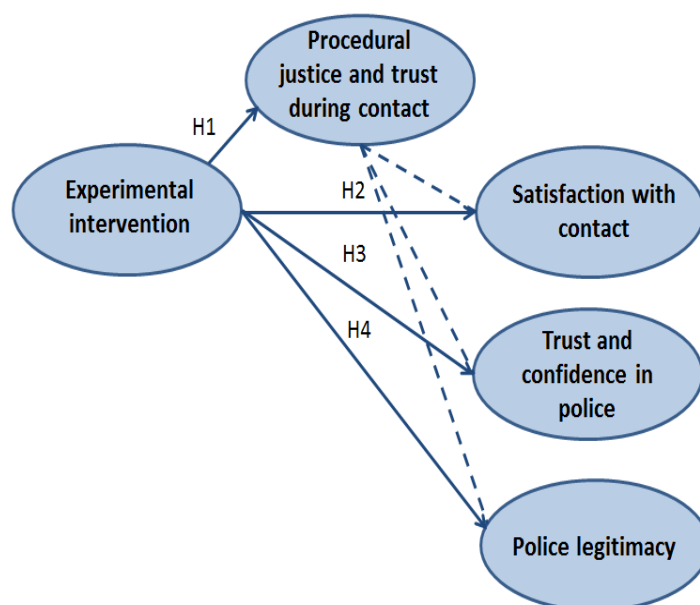

Figure 1. Conceptual map

Response

Over the course of the trial, 12,431 questionnaires were issued to drivers. In total 816 questionnaires were returned by the cut-off point in April 2014: 305 in the baseline ('pre' period), comprising 122 responses from the units assigned to the experiment condition and 183 from those assigned to the control condition; and 511 in the 'post' period, comprising 176 responses from the experiment condition and 335 responses from the control condition. The overall response rate is 6.6 per cent. Of the responses achieved, the majority were male drivers (63%) and the mean age was 50.7 (SD=14.8, min=17 years, max=87 years). Three quarters (75%) of the sample were owner-occupiers, and 40 per cent had a first degree or higher, while 12 per cent reported they had no qualification. Seventy one per cent were in employment, 21 per cent were retired; and 73 per cent were married or in a *de facto* married relationship. Crucially, there was no significant difference pre and post, or between experimental or control groups, on any of these measures, suggesting that the approach to design achieved broad equivalence between experiment and control groups.

Findings

Overall, analyses highlighted that driver opinion about the police in terms of each of the key constructs measured was highly favourable. With regard to procedural justice, over 80 per cent of respondents answered that the police 'completely' met each criterion of interest. Similarly, the overwhelming majority 'agreed' or 'strongly agreed' with the indicators of trust in police officers and around 90 per cent of respondents reported being 'very' or 'fairly' satisfied with officer conduct, personal treatment and encounter outcome.

However, comparing the effect of the experimental intervention against that of the control condition revealed interesting results. Across the control areas there was a consistent pattern of improvement in scores over the key constructs over the course of the campaign. Yet this pattern was not repeated in the experiment areas. In fact, driver assessments of procedural justice during encounters and subsequent driver satisfaction *fell* in the experiment areas relative to the control areas. Thus the experimental intervention appeared to diminish the sense of procedural justice having been adhered to by police officers during encounters, and led to a decrease in satisfaction with encounters within the experiment group. The opposite of the effect predicted in H1 and H2 outlined above. H3 and H4 found no support in the data, with general trust and conferment of legitimacy shown to be similar across both groups.

Overall, the experimental intervention had some unintended detrimental impact on policing practice, which led to some small but significant negative effects on public perception. These findings are

unexpected. The experimental intervention was designed in line with existing evidence on procedurally just modes of policing and effective police-public communication, led by previous successful experimental intervention in the field (Mazerolle et al, 2011; 2012) and incorporating the fundamental elements of the procedural justice model: treating drivers with dignity and respect; demonstrating neutrality of decision making and trustworthy motives for action; and presenting drivers with opportunities to be an active participants during and after the encounter (Tyler, 2006; Tyler and Huo, 2002). Moreover, those police officers responsible for implementing the experimental intervention were key contributors to its design.

Drawing on extensive collective experience of policing and interaction with the public, officers devised key messages and shaped the ways in which these ought to be communicated. For this to have had a detrimental effect on perceptions of procedural justice and satisfaction is surprising. Nevertheless, we suggest that in policing contexts where police/citizen interaction and satisfaction are already high, it is not enough to simply up the 'dosage' of procedural justice to positively 'shift' perceptions. There is more to successfully operationalizing the procedural justice model than merely adding in the components

As yet, nothing in the data gathered explain *why* the observed effects occurred. In order that meaningful conclusions may be reached and the implications for policing practice and theory development drawn out, the research team are currently engaged in qualitative fieldwork with officers involved in experiment delivery to understand better the impact of experiment implementation.

Policing Research in the Consortium Universities

In addition to reporting on research and knowledge exchange supported directly by SIPR, the Annual Report also provides an opportunity to highlight other policing research and knowledge exchange activity being carried out within universities that comprise the SIPR Consortium.

Roles of Alcohol in Intimate Partner Violence

Professor Liz Gilchrist, Dr Lana Ireland, Dr Alasdair Forsyth, Tim Laxton & Professor Jon Godwin
Glasgow Caledonian University

One of the key findings of previous work¹ is that whilst alcohol is often present in relationships characterised by Intimate Partner Violence (IPV), there is little evidence of consistent attitudinal difference between those who are abusive in their intimate relationships and those who are not. There is the view that alcohol is only an excuse, used as a post hoc explanation for IPV².

One driving aim of the research was to explore the possibility that alcohol, and perhaps specific patterns of alcohol use or sets of beliefs about alcohol, may work alongside problematic pro-abuse attitudes and provide some explanation for the different outcomes.

This study, funded by Alcohol Research UK, and supported by Glasgow Caledonian University, sought to tease out the various potential relationships between alcohol and IPV, across three groups of people, those in abusive relationships (*convicted*), those in conflictual relationships (*conflicted*) and those in harmonious relationships (*content*), and aimed to increase our theoretical understanding of these links and from this develop a better understanding of the implications for interventions for victims and perpetrators.

Brief Description of Methods

The study collected quantitative data from police over a number of years, relating to their call-outs on domestic abuse incidents; and attitudinal and behavioural measures from a range of groups of individuals. Qualitative data was collected from the convicted sample, exploring the perceived and reported links between drinking and relationship conflict, and also sought to explore cultural events known to co-occur with drinking and domestic violence, such as football. The three phases were:

Phase 1 involved secondary data, incorporating statistical analysis of cases from Strathclyde Police's databases which provided details of 220,847 police call-outs to domestic incidents.

Phase 2 involved 80 quantitative interviews with three groups who were termed as follows; the 'convicted' (male prisoners - including both those convicted of domestic offence and general offenders), the 'conflicted' (mainly female clients of agencies dealing with domestic issues – comprising those who might be considered as 'victims'/survivors of domestic problems), and the 'contented' (male community football players – envisaged to be experiencing general population levels of relationship conflict).

All three groups received the same questionnaire pack which included three validated screening tools that assess alcohol and/or violence risk, specifically:

- The Alcohol Use Disorders Identification Test (AUDIT);
- The Alcohol Related Aggression Questionnaire (ARAQ);
- The revised Conflict Tactics Inventory (CTS2) (Phase 2 and Phase3)

Phase 3 involved semi-structured one-to-one digitally recorded qualitative interviews with a subset of the prisoner group who had completed the questionnaire pack from Phase2.

Key Findings

Police Data

Analysis of police callouts to domestic incidents revealed that alcohol was logged as being involved in nearly 70% of these, with 61.4% of accused and 36.4% of victims being recorded as under the influence. 82.4% incidents involved a male accused and female victim (though the majority of both male and female accused were under the influence).

The majority of police call-outs to a domestic incident were made to a dwelling house. Of the 220,847 incidents in the police data set, 192,280 (87.1%) were to a house and around half (98,227, 51.1%) were identified as being the 'Victim's Home'.

In a large majority of cases the 'Victim' was female (n=182,156, 83.1%) and in a large majority the 'Accused' persons in these domestic incidents were male (n=181,411, 83.2%).

Far smaller numbers were recorded as being either 'Drug Related' (n=2,574, 1.2%) or 'Drug and Alcohol Related' (7,450, 3.4%).

The accused were more likely to be identified as being under the influence of alcohol regardless of gender, with a majority of the accused men (n=94,073, 62.3%) and women (18,483, 57.1%) being intoxicated. It was the minority of victims who were recorded as being under the influence of alcohol; again this was regardless of gender, with around one third of female victims (n=59,717, 34.4%) and less than half of male victims (16,399, 46.5%).

Questionnaire Data

The project used a range of questionnaires, including standardised measures of relationship conflict and alcohol use. Data were collected from 'convicted' (n=40), 'conflicted' (n=17) and 'contented' (n=23) participants. The 'convicted' and 'contented' groups were exclusively male, while the 'conflicted' group was predominantly female (13/17). The majority of participants described their sexual orientation as 'straight'. The groups were of a similar age range and partner status, but the 'convicted' group was less well educated and the 'contented' group had fewer children.

Total AUDIT scores and responses to the Alcohol Related Aggression Questionnaire varied across the three groups, with the 'convicted' groups scoring higher than the 'conflicted' or the 'contented', indicating that the prisoners were more likely to engage in alcohol-related violence than the other two groups.

Scores on the Conflict Tactics Scale (CTS2) also varied greatly across the three groups, however on this occasion both the 'convicted' and 'conflicted' had equally elevated scores as compared to the 'contented' group.

Overall those convicted of domestic abuse were more risky drinkers and associated their drinking with aggression more than the other groups. Interviewed participants considered alcohol to have a direct effect on their behaviour and did sometimes present alcohol as an exculpatory factor.

Interview Data

The qualitative interview phase indicated a high rate of problematic alcohol use in prisoners' family backgrounds, and conscious awareness of the effects of alcohol use in enabling violent behaviour and criminality. Participants considered alcohol to have a direct effect on their behaviour and also did sometimes present alcohol as an exculpatory factor. Multiple roles by which alcohol use may influence partner conflict were reported (not just

intoxicated violence), including male entitlement to drink and alcohol spend harming limited family budgets.

However, alcohol's role in conflict was not restricted to times of intoxication but extended across issues such as male entitlement to drink, control or prevention of his partner's drinking and his spending from family budget to buy drink. When women were drinking, they were held more accountable for any relationship conflict, whilst if men were drinking they were held to be less accountable.

Conclusions and Implications

This research suggests that certainly in this area of Scotland, alcohol is a correlate of domestic abuse; however the roles played by alcohol for perpetrators and victims and for men and women are complex and need disentangling.

Alcohol was a common feature in the police call outs to domestic abuse incidents, but there was a clear difference in the likelihood of perpetrators or victims being deemed to be 'under the influence' and this were not directly linked to gender. High alcohol use and strong beliefs about involvement in alcohol related violence featured in the lives of the higher risk participants, and alcohol was a strong feature in the conflict and abuse accounts of our offender participants.

The high levels of alcohol consumption and the prevalence of alcohol related behaviour and beliefs, in our convicted sample, and relationship conflict in our conflicted and convicted samples, suggests that joint intervention might be appropriate for those experiencing relationship conflicts.

Impact

This work has been identified as being useful in unpicking data already known to the police, and providing it with meaning, such that it could be used in planning strategic action, as was the case in relation to the 2015 'Auld firm' football cup game in Glasgow (Police Scotland comment, January 2015).

Emergency Service Collaboration (ESC)

Dr Denise Martin (*University of the West of Scotland*), Jon Parry (*Skills for Justice*), Professor Eddie Kane (*University of Nottingham*) Dr Siddhartha Bandyopadhyay (*University of Birmingham*)

In November 2014, the Emergency Services Collaboration Working Group, through the Home Office, commissioned research to evaluate existing and emerging emergency services collaboration in order to establish an evidence base for greater cooperation across the emergency services. This research led by Skills for Justice, included a consortium of other Universities including Nottingham, Birmingham and the University of West of Scotland.

The key research questions for the research related to whether collaboration been achieved? To what extent do these collaboration projects support wider public service change? How do collaboration projects ensure longevity and become sustainable? What lessons have been identified? What evidence is there of successful outcomes (including financial) of these projects? Which indicators should be used to monitor collaboration activity in the future? What evidence is there of wider sharing of the lessons and of them being learnt?

Policy Drivers

According to much of the grey literature resilience, efficiency and reducing bureaucracy are key principles that have underpinned collaboration. Since the introduction of austerity measures for public services, thinking around co-operation between emergency services has intensified. What was once considered exceptional performance required in the event of a major incident is now becoming part of the expected response to budget cuts. The Knight Report, whilst placing most of its emphasis on the need for rationalisation of structures within the Fire Service, admitted that "national level changes to enable greater collaboration with other blue-light services, including through shared governance, co-working and co-location, would unlock further savings¹."

Collaboration has also been viewed not just as potentially realising savings but also as a duty and obligation. This was evident in policy and legislation across all the blue-light services. For example, *The Police Reform and Social Responsibility Act, 2011* inserted new duties on chief officers and policing bodies to "keep collaboration opportunities under review and to collaborate where it is in the interests of the efficiency or effectiveness of their own and other police force areas."

Other reports² and policy identified collaboration as fragmented and slow to progress. The HMIC has expressed concern about the *ad hoc* way collaboration is being implemented. In its July 2012 report *Increasing Efficiency in the Police Force - the role of collaboration*, it sounded a warning: "A step change" requires knowledge and understanding of what works best in delivering high value savings whilst protecting visible policing. Experimentation with different approaches rather than making evidence based and informed decisions about where and how to make savings is time consuming and costly - both of which are in short supply. In a later report the

HMIC noted that 'extensive collaboration is not materialising in the majority of forces, and only a few are achieving substantial savings.' Justification for this has often been the incompatibility of organisational structures and culture

The Research

The approach combined qualitative and quantitative data collection from primary and secondary sources. This included interviews, focus groups, surveys (out of area and public), performance reports, academic literature and policy documents. The practical possibilities of mixing inquiry methodologies contributed to, and reflected, the complexity and diversity of the challenges involved in *inter* and *intra* service collaboration.

Some Key Findings

A key part of the research was to identify what the enablers and barriers to collaboration are. These are initial findings from the research team; the final report is currently being produced and will be available shortly.

Enablers of collaboration

Seven key enablers of collaborations were identified:

- *A clear and shared vision of the objectives of the collaboration.* The most effective of these covered staffing, facilities, revenue and capital budgets and were seen as essential if collaborations were to realise potential benefits.
- *Trust at all levels of the collaborating agencies.* The most effective collaborations were underpinned by high levels of trust between organisation and key individuals.

- *Clear, shared resource plan.* Taking into account differing funding arrangements and broken into achievable steps.
- *Agreed and realistic timeline and delivery pathway.*
- *Local cross party political buy-in and overt support.* Without this, effective collaboration would be unlikely
- *Robust governance architecture.* It was seen as essential that time needed to be spent at the outset designing, testing and embedding a governance infra-structure in order to ensure this complexity and potential challenge could be managed as work progressed.
- *Retaining service identity.* Services were keen to maintain the key features of their identify which were seen as critical to the service but that also allowed for effective collaboration to happen.

Barriers to collaboration

There were six key barriers to collaboration noted/identified:

- *Current focus of collaboration.* The focus of collaboration should be across all levels of service and include non-blue light agencies.
- *Funding streams and cycles* which are inflexible and varied can make it difficult to sustain projects

across partners and make it difficult for long-term planning.

- *Organisational differences,* can make it difficult to succeed but these issues can be overcome. Learning how this is achieved is critical.
- *Representative bodies.* The role of the various representative bodies is rightly to ensure the welfare of their members. Staff engagement with both representative staff and other staff are seen as critical.
- *Current legislation.* A number of instances of where current legislation was a barrier to collaboration were highlighted. There is no doubt that some of the far-reaching vision described during the evaluation would need changes to primary legislation and consideration should be given to this in the future.
- *Government Departments.* A number of instances where a more coherent, consistent and shared vision would be helpful from the key policy-making departments supporting blue light services were highlighted during the evaluation work.

Police Interpreting Research and Knowledge Transfer in the Centre for Translation & Interpreting Studies in Scotland (CTISS), Department of Languages and Intercultural Studies, (LINCS), Heriot-Watt University

Co-Minor-In/Quest

Professor Ursula Böser & Christine Wilson

During a two-day conference on the 13th and 14th of November in Antwerp, the findings of the Co-Minor-IN/QUEST project were presented. Keynote speakers from various professional fields (police, justice, psychology, child support and interpreting) discussed current practices in interpreter-mediated communication with children, particularly in the pre-trial phase of criminal cases. In a joint presentation, special attention was given to working with particularly vulnerable children. The project partners outlined the results of the international survey they had conducted and presented findings on the interpreter's role, interpreting modes, (de)briefing and support, and joint training. Speakers from Scotland included David La Rooy from Dundee Abertay University. He spoke about the psychologist's perspective of current practice in child interviewing. Ursula Böser and Christine Wilson presented about challenges to dominant role definitions for interpreters when working for children in investigative settings. The challenges of working with children in an investigative setting were addressed by Catherine King and Maryam Mojab from the perspective of sign as well as spoken language interpreters.

The conference provided an opportunity to disseminate the results of the research project, but also to promote an interdisciplinary exchange of knowledge and best practices in the field of interpreter-mediated child interviewing. Based on the project findings, recommendations were formulated in the form of a Code of Practice for practitioners and interpreters. A more in-depth discussion of the issues identified will be available in an edited volume which will be available from April 2015.

Justisigns - Professor Jemina Napier

Jemina Napier received new funding at the end of 2013 (€75,000) from the EU Leonardo Da Vinci Lifelong Learning Programme for a project called 'Justisigns', to investigate signed language interpreting in legal settings across Europe. This project will run for 30 months in collaboration with Trinity College Dublin, KU Leuven, the European Forum of Sign Language Interpreters and the European Legal Interpreters and Translators' Association.

Further Activities

Researchers contributed to the Course on Hostage and Crisis Negotiation at the Scottish Police College with sessions on interpreted-mediated Hostage negotiation.

Heriot-Watt University is presently organising the Critical Link International Conference which will take place in 2016. This is the biggest international conference on Public Service Interpreting and translation in medical, social and legal settings. The Conference at Heriot-Watt will be the 8th of its kind, and Police interpreting will be one of the focuses of the event.

Impact

CTISS submitted an impact case study to the Research Excellence Framework 2014 exercise. Under the title *Promoting Equal Access to Justice in Multilingual Societies* this focused on police interpreting. Three mature strands of impact were identified in the study:

- Informing and guiding changes to police practice and training for working with interpreters at national and international level. Influencing legal professionals and policy makers in the area of communication support in investigative processes.
- Providing the foundation for evidence based policy-making in multilingual communication support.
- Intervening in a vicious circle of under professionalisation by focusing on the development of professional training, quality assurance and professional accreditation.

The CTISS impact case study on police interpreting came 1st in Scotland and second in the UK among units rated in its disciplinary peer group (Modern Languages and Linguistics) and thus acknowledges the fruitful co-operation between researchers and practitioners that CTISS has created between research and practice in this field.

Final conference of the Co-Minor-IN/QUEST Project at Leuven University, Antwerp

The Distinguished Achievement Award in Evidence-Based Crime Policy

The Distinguished Achievement Award in Evidence-Based Crime Policy is the highest honour given by the Center for Evidence-Based Crime Policy (CEBCP) each year in recognition of outstanding achievements and contributions by individuals in academia, practice, or the policy arena who are committed to a leadership role in advancing the use of scientific research evidence in decisions about crime and justice policies. This year's award winners are Professor Nicholas Fyfe from the Scottish Institute for Policing Research (University of Dundee) and Professor Jeremy Travis from John Jay College of Criminal Justice, New York City. The following are Professor Fyfe's remarks on receiving the award at the SIPR-GMU symposium in Scotland.¹

Receiving this award is a huge honour and I first want to express my thanks to David Weisburd, Cynthia Lum and the CEBCP nominating committee. The work of CEBCP has been a great inspiration to me in my role as Director of the Scottish Institute for Policing Research (SIPR). The quality of CEBCP's research, its commitment to independence and relevance, its focus on working with practitioners and the policy community, and its investment in knowledge exchange and knowledge translation are all things which we in Scotland have learned a great deal from over the years and so it is a particular pleasure and honour to receive this award from your Center.

Although I was disappointed not to be able to travel to the United States to receive the award earlier in the year, there is something very special about receiving it here in Scotland at the Scottish Police

College during this the second SIPR-GMU symposium, with so many friends and colleagues from SIPR and those involved in Scottish policing and policing research. This is partly because I see this award as a recognition of our collective endeavours, one that recognises the achievements of SIPR's unique strategic partnership between 12 universities and the Scottish police service as much as my individual contribution; and partly because it was here at the Scottish Police College in October 2006 that we launched SIPR. I have dusted down the notes that I prepared for my speech that day because so much of what I said then is still very relevant now, but you will be relieved to know that I am not going to repeat the whole of that speech (particularly those of you who heard it eight years ago!). However, there is one short passage about aims and opportunities that I think is worth repeating.

In terms of SIPR's aims, I highlighted how the Institute would build on the foundations of existing policing research in Scotland to undertake high quality research of relevance to the police and enhance processes of knowledge transfer and exchange so that research can provide the basis for informed, evidence based contributions to policy and practice. In terms of opportunities, I highlighted how the Institute would increase the capacity and opportunities for relevant, applicable research via investment in new lectureships, post-doctoral and PhD positions and in Practitioner Fellowships that support police personnel to access research evidence and learn new research skills. I also highlighted how the Institute would increase opportunities for 'adding value' to research via new knowledge transfer structures and knowledge exchange activities, including joint police-academic seminar programmes, conferences and Continuing Professional Development courses.

In the eight year since I made that speech, SIPR has not only exceeded expectations in terms of delivering on its aims and creating opportunities, but its structure of collaboration between higher education institutions and policing, its development of a culture of engagement and a relationship of trust between academics and police practitioners, is now admired across the world. There are particular people and

organisations represented here this evening who I would like to thank for making SIPR such a success. In terms of its origins, it was Peter Wilson who while a Chief Constable and President of the Association of Chief Police Officers in Scotland first had the vision of a policing research institute in Scotland which started the process that led to SIPR. Since then a small group of academics and police colleagues have invested a great deal of time and energy over the years as members of SIPR Executive Committee, steering the strategic development of the Institute.

These include Dr Alistair Henry (University of Edinburgh and lead for the network on Police-Community Relations), Professor Jim Fraser (University of Strathclyde and lead for the network on Evidence and Investigation); Professor Tara Fenwick (University of Stirling and lead for the network on Education and Leadership); Deputy Chief Constable Neil Richardson OBE, Deputy Chief Constable Iain Livingstone; Dr Tom Nelson OBE (Director of Forensic Services); and Tim Heilbronn (SIPR Administrator and Knowledge Exchange Manager).

Finally, if it wasn't for the wider community of researchers (from postgraduates to established academics), police practitioners (from constables to chief officers) and colleagues in those organisations we work so closely with (including Her Majesty's Inspectorate of Constabulary, the Scottish Police Authority and the Scottish Government) we would not have been able to achieve all that we have done over the last 8 years in terms of supporting evidence-based approaches, innovation and professional development in policing.

In closing there are two other issues I want to highlight. The first concerns the state of policing research. A few years ago I was asked to deliver the keynote lecture at the CEPOL (European Police College) Research and Science Conference about the future of police science and I focused on 3 'P's.

The first 'P' concerned the 'paradox' of police science: that despite the increase in volume of policing research in recent years, the extent to which this research is used in policy and practice has remained limited.

The second 'P' was about 'paradigms' and the way that a paradigm shift in the relationship between science and policing is now underway, involving greater use of evidence to inform police decision-making.

The 3rd 'P' was about 'pluralism' and the need for a plurality of approaches in order to achieve the effective integration of research evidence into discussions about police policy and practice. Furthermore, this commitment to pluralism, I argued, also needed to extend to how we think about the different uses of police research, the different types of intervention researchers make into public discourse about policing, and the different institutions that exist to promote the development and use of police research.

What is particularly special about this evening is that so many of the people whose work and activities I referenced in my lecture and who have contributed so much to addressing the paradox of police research, to shifting paradigms, and to promoting pluralism are here: not only Cynthia and David but Peter Neyroud (University of Cambridge and a previous recipient of this award), Gloria Laycock (University College London), Betsy Stanko (Mayor's Office of Police and Crime), Jenny Fleming (University of Southampton) and Sandra Nutley (University of St Andrews).

My final point is that a significant and continuing challenge for policing research is to find a way of helping inform police decision making at a time when public and political pressures for 'quick fixes' are growing. Now more than ever the police need a knowledge base for professional practice that can help inform a vision of 'good policing' in democratic societies that promotes better public security, a reduction in crime, enhanced social justice, and the protection of liberty and human rights. This requires bringing together the insights generated by a plurality of approaches to police research and drawing on what we know about effective mechanisms for knowledge exchange between researchers and practitioners. Police research should provide critical insights into, and reflections on, what constitutes good policing in democratic societies, and through contributions to police education, policy and training, help stimulate the intellectual development, critical thinking and problem solving skills of all those who work in and with police organizations. That is exactly what CEBCP have been doing so effectively over many years and is what SIPR is also clearly focused on. This award recognizes that work and I am deeply honoured to receive it.

Johanne Roebuck <i>The Nature and Impact of Violence Prevention Strategies within Police Scotland</i>		UWS Studentship	UWS	Deuchar
Carol Roxburgh <i>Police Professionalisation and the police in Scotland: the role of Higher Education</i>	Police Organization	UWS	UWS	Scott
Georgia Scott-Brien <i>Policing rape in Scotland</i>	Police Organisation	Glasgow Caledonian University	Glasgow Caledonian	McMillan Tombs
Louise Settle <i>Regulation of prostitution</i>	Police Organization		Edinburgh	Davis Jackson
Sarah Shrimpton <i>Facial avatars and familiar face recognition</i>	Evidence and Investigation	DSTL	Dundee	Wilkinson
Katherine Smith <i>Food Security and Collective Violence</i>	Police-Community Relations	self funded	St Andrews	Murer
Ailsa Strathie <i>Improving the reliability of eyewitness identification</i>	Evidence and Investigation	ESRC	Glasgow Caledonian	McNeill
Sana Sukhera <i>Government as Outgroup: Political Participation and Identity</i>	Police-Community Relations	self funded	St Andrews	Murer
Maureen Taylor Group Associated Child Sexual Exploitation: Exploring the Connections	Evidence and Investigation	GCU	GCU	McMillan Robertson
Grant Thomson <i>The development of an atlas for cut marks on bone</i>	Evidence and Investigation	self-funded	Dundee	Black
William Thompson <i>Teaching and Learning Peace: Israeli-Palestinian Joint Educational Programmes</i>	Police-Community Relations	self funded	St Andrews	Murer
John Tsukiyahama <i>Democracies and the Use of Torture in Counter Terrorism</i>	Police-Community Relations	self funded	St Andrews	Murer
Ashley Varghese <i>Human-trafficking</i>	Evidence and Investigation		Edinburgh	Sparks
Claire Wason <i>'Sectarianism', Scotland & the Rule of Law</i>		GCU	GCU	Wheate Frondigoun Connolly
Liam Wells <i>Alcohol and the Game: An Ethnography of Male Football Players and Supporters</i>	Evidence and Investigation	UWS	UWS	Deuchar

SIPR Research and Knowledge Exchange Awards 2014

Topic	Network	Funder	Value	HEIs	Investigators
Developing a mobile App to support child interviewers	Evidence & Investigation	SIPR	£3,000	Abertay	LaRooy Ferguson
RIO (Remote Internet Observation)	Evidence & Investigation	SIPR	£4,911	Abertay	Coull Ferguson Macleod
Police Crime and Intelligence Analyst Training	Education & Leadership	SIPR	£3,002	Edinburgh	McVie Gayle Thomson
Dual Reports of Domestic Abuse made to the Police in Scotland	Evidence & Investigation	SIPR	£4,900	Glasgow	Brooks
Evaluation of the National Forensic Science Gateway	Evidence & Investigation	SIPR	£4,271	Strathclyde	Fraser
Scoping Exercise for Safer Communities Evidence Matrix Scotland	Police-Community Relations	SIPR	£4,938	Edinburgh Napier UWS	Aston Scott
Accelerating professional judgement & decision making expertise: feedback and scenario-based training in crime scene examination	Education & Leadership	SIPR	£4,979	Edinburgh	Martindale

External research and knowledge exchange grants awarded in 2014

Topic	Network	Funder	Value	HEIs	Investigators
Think Tank Sessions and Evidence Review	SIPR	Police Scotland	£20,000	Dundee Edinburgh	Fyfe Henry
Evaluation of the Stop and Search Pilot in Fife Division	Police-Community Relations	Police Scotland / SIPR	£34,000	Dundee Edinburgh Napier	O'Neill Aston
Rape Advocacy Pilot	Evidence & Investigation	Police Scotland / SIPR	£19,498	Glasgow	Brooks Burman
Stimulating Desistance among Young Violent Offenders: The Impact of Boxing, Youth Work and Pastoral Care	Police-Community Relations	Carnegie Trust	£1,786	UWS	Deuchar
L&B Community Justice Authority Learning and Innovation Workshops	Education & Leadership	Lothian and Borders Community Justice Authority	£2,990	Edinburgh Napier	Aston
Procedural justice in practice: Exploring the outcomes of the Scottish community engagement trial (ScotCET)	Police-Community Relations	Moray Endowment Fund	£1,800	Edinburgh	MacQueen Bradford
Visiting scholarship at the Centre for Policing and Security, University of Queensland	Police-Community Relations	University of Queensland Travel Award scheme	£5,000	Edinburgh	MacQueen
Historicizing “historical child sexual abuse” cases: social, political and criminal justice contexts	Evidence & Investigation	ESRC	£105,489	Edinburgh	Jackson
Homicide Investigation and Forensic Science: Tracing Processes, Analysing Practices	Evidence & Investigation	Leverhulme Trust	£216,500	Strathclyde	Fraser
The influence of professional cultures, perceptions, practices on investigative use of forensic science	Evidence & Investigation	Scottish Government	£6,200	Strathclyde	Fraser Shaw
Developing Consensus on Remote Healthcare Practitioners' Competency	Evidence & Investigation	Institute of Remote Health Care	£5,788	RGU	Klein Williams Robertson Watson

Research Publications and Conference Presentations 2014

This section includes relevant publications submitted by researchers within the consortia of 12 Universities.

Publications with a 2013 publication date are also included where these were not included in the Annual Report for 2013.

Articles in Refereed Journals

ALEXANDER, D.A. (in press). Early mental health interventions after disasters. *Advances in Psychiatric Treatment*.

ASTON, E.V. (in press). Are risk factors for drug use and offending similar during the teenage years? *International Journal of Drug Policy*. doi:10.1016/j.drugpo.2014.11.002

BAKER, M.J., TREVISAN, J., BASSAN, P., BHARGAVA, R., BUTLER, H., DORLING, K.M., FIELDEN, P.R., FOGARTY, S.W., FULLWOOD, N.J., HEYS, K., HUGHES, C., LASCH, P., MARTIN-HIRSCH, P.L., OBINAJU, B., SOCKALINGUM, G.D., SULE-SUSO, J.R., STRONG, J., WALSH, M.J., WOOD, B.R., GARDNER, P. & MARTIN, F.L. (2014). Using Fourier Transform Infrared Spectroscopy to analyse biological materials. *Nature Protocols* 9, 1771-1791.

BAKER, M.J., GRAVETT, M.R., HOPKINS, F.B., CERYS REES, D.G. RICHES, J.R. SELF, A.J., WEBB, A.J. & TIMPERLEY, C.M. (2014). Plants as nerve agent detectors. *OPCW Today* 3(1), 27 – 36.

BIEDERMANN, A., TARONI, F. & AITKEN, C.G.G. (2014). Liberties and constraints of the normative approach to evaluation and decision in forensic science: a discussion towards overcoming some common misconceptions. *Law, Probability and Risk* 13, 181-191. doi:10.1093/lpr/mgu009

BRADFORD, B., JACKSON, J., HOHL, K. & MacQUEEN, S. (2014). Obeying the rules of the road: Procedural justice, social identity and legal compliance' accepted by *Journal of Contemporary Criminal Justice* Online advance access DOI: 10.1177/1043986214568833

BUCHANAN, W. (in press). The Increasing Challenge for Digital Forensics. *The Texas Investigator*, 10-12.

BUCKLETON J., BRIGHT J., TAYLOR D., EVETT I., HICKS T., JACKSON G. & CURRAN J.M. (2014). Helping formulate propositions in forensic DNA analysis. *Science & Justice*. 54(4), 258-261. <http://dx.doi.org/10.1016/j.scijus.2014.02.007>

CARSON, D., LINDSAY, W.R., HOLLAND, A. J., TAYLOR, J. L., O'BRIEN, G., WHEELER, J., STEPTOE, L & JOHNSTON, S. (2014). Sex offenders with intellectual disability referred to levels of community and secure provision: comparison and prediction of pathway. *Legal and Criminological Psychology* 19, 373-384. DOI:10.1111/lcrp.12005

CARSON, L. & LA ROOY, D. (2014). 'Commonsense psychology' is a barrier to the implementation of best practice child interviewing guidelines: A qualitative

analysis of police officers' beliefs in Scotland. *Journal of Police and Criminal Psychology*, DOI 10.1007/s11896-013-9139-5

DAVIDSON F.P. & FERGUSON, P.R. (2014). The corroboration requirement in Scottish criminal trials: Should it be retained for some forms of problematic evidence? *International Journal of Evidence & Proof* 18, 1-27.

DEUCHAR, R., MILLER, J. & BARROW, M. (2014). Breaking down barriers with the usual suspects: Findings from a research-informed intervention with police, young people and residents in the West of Scotland. *Youth Justice*. DOI: 10.1177/1473225414530538.

EARHART, R., LA ROOY, D., BURBACHER, S. & LAMB, M. E. (2014). What don't we know about don't know responding in forensic interviews with children? *Behavioral Sciences & Law*. DOI: 10.1002/bsl.2149

EVANS, M.J., CLEMENS, G., CASEY, C. & BAKER, M.J. (2014). Developing a mobile app for remote access to and data analysis of spectra. *Vibrational Spectroscopy* 72, 37-43. <http://www.materialstoday.com/materials-chemistry/news/an-app-for-remote-analysis-of-spectroscopy-data/>

FARRUGIA, K.J., DEACON, P. & FRASER, J. [Joanna] (2014). Evaluation of Lumicyano™ cyanoacrylate fuming process for the development of latent fingerprints on plastic carrier bags by means of a pseudo operational comparative trial. *Science & Justice* 54 (2), 126-132.

FARRUGIA, K.J., FRASER, J.[Joanna], CALDER, N. & DEACON, P. (2014). Pseudo-operational trials of Lumicyano Solution™ and Lumicyano Powder™ for the detection of latent fingerprints on various substrates. *Journal of Forensic Identification* 64 (6), 556-582.

FENWICK, T. (2014). Knowledge circulations in interpara/professional practice: a sociomaterial enquiry. *Journal of Vocational Education and Training* 66 (3), 264-280.

FERGUSON, P.R. & McDIARMID, C. (2014). A victory for fairness and common sense: *R v Hughes*. *Edinburgh Law Review* 18, 84-86.

FERGUSON, P.R. (2014). Moving from Preparation to Perpetration? Attempted Crimes and Breach of the Peace in Scots Law.) *Ohio State Journal of Criminal Law*, 687-700.

FRASER, J. [Joanna], DEACON, P., BLEAY, S. & BREMNER, D. (2014). A comparison of the use of

- vacuum metal deposition versus cyanoacrylate fuming for visualisation of fingerprints and grab impressions on fabrics. *Science & Justice* 54 (2), 133-140.
- FYFE, N.R., STEVENSON, O. & WOOLNOUGH, P. (2014). Missing Persons: the processes and challenges of police investigation. *Policing and Society*. Published online 5 Feb 2014. DOI: 10.1080/10439463.2014.881812
- GORDON, V., DONNELLY, P. D. & WILLIAMS, D. J. (2014). ADHD symptoms and their relationship to criminal convictions and prison breaches of discipline. *Personality and Individual Differences*, 58, 116-121.
- GRAVETT, M.R., HOPKINS, F.B., SELF, A.J., WEBB, A., TIMPERLEY, C.M. & BAKER, M.J. (2014). Evidence of VX nerve agent use from contaminated white mustard plants. *Proceedings of the Royal Society A* 470 (20140076).
- GRIBBLE, R., WESSELY, S., KLEIN, S., ALEXANDER, D.A., DANDEKER, C. & FEAR, N.T. (2014). Public Awareness of UK Veterans Charities. RUSI; doi: 10.108003071847.2014.895258.
- GRIBBLE, R., WESSELY, S., KLEIN, S., ALEXANDER, D.A., DANDEKER, C. & FEAR, N.T. (2014). British public opinion after a decade of war: attitudes to Iraq and Afghanistan. *Politics*. Article first published online: 16 SEP 2014 DOI: 10.1111/1467-9256.12073

An evaluation of a pilot project on 'Intelligence-orientated Neighbourhood Security Interviews' (i-NSI). Alexis Cran (Strathclyde Police), Niall Hamilton-Smith (University of Stirling) & Simon Mackenzie (University of Glasgow)

Evaluation of the Strathclyde Extended Deployment of Taser Pilot Kenneth Scott, University of the West of Scotland

Programme of Network Seminars and Events

Further details of these events, with PowerPoint slides and podcast where available, can be found on the SIPR website at www.sipr.ac.uk/events/past.php, or the website of the collaborating body where shown.

Police and Community in Scotland - Past, Present and Future Workshop

7 March 2014, Perth Police HQ

This workshop, organised by Louise Jackson and jointly funded by SIPR and the University of Edinburgh, aimed to evaluate the different models that have characterised the relationship between police and communities in Scotland. It brought together police researchers, practitioners, historians, archivists and curators to discuss how past and present can be brought together for future benefit. In what ways can we learn from the past? How have communities changed in Scotland, and what does this mean for policing? What are the current challenges for local policing? How might police history be used to build links with local communities?

Historical perspectives: the relationship between police and community in twentieth-century Scotland

Neil Davidson, Louise Jackson, Richard Sparks, Davie Smale

University of Edinburgh

Historical perspectives: policing and technological change

Police Amalgamation and Reform: Historical and Geographical Comparisons

2 May 2014, University of Dundee

The second of two events organised by Louise Jackson and jointly funded by SIPR and the University of Edinburgh, this seminar explored what might be learnt from historical and geographical comparisons of police amalgamation and organisational reform. It examined the opportunities and challenges that have surfaced in different contexts, and the effectiveness of responses. How might past experience inform current debate? How might geographical comparisons enable best practice?

Police amalgamation and reform in Scotland: long-term perspectives

Neil Davidson, Louise Jackson and Davie Smale

University of Edinburgh

Comparison of the 2013 police reforms in Scotland and the Netherlands -reform, implementation and local policing

Police Professionalism, Education and Learning

24 June 2014, University of Stirling

ProPEL: Professional Practice, Education and Learning

An International Network for Research at the University of Stirling

This full day Conference was jointly organised by ProPEL (Professional Practice, Education and Learning) and SIPR. The event aimed to help inform and contribute to current discussions about the future direction of police education and professionalism in Scotland and included presentations that offered insights into experiences of England and Wales, Europe and the US as well providing opportunities for discussion about developments in Scotland.

<i>Welcome and Introduction</i>	Professor Tara Fenwick	Director of ProPEL and Associate Director, SIPR
<i>Police Professionalism, Education and Learning -the context, the timing, and the issues</i>	Professor Nick Fyfe	Director, SIPR
<i>Police education in England and Wales: a changing landscape</i>	Dr Steve Tong	Canterbury Christ Church University
<i>Towards a European Police Education system: A view from Brussels</i>	Professor Sofie de Kimpe	Free University of Brussels
<i>Pathways to Policing in Scotland</i>	Supt. David Moffat	Police Scotland
<i>New demands and dilemmas for professionals: implications for rethinking policing education and learning</i>	Professor Tara Fenwick	Director of ProPEL and Associate Director, SIPR
<i>Comparing UK and US models of police education: the danger of McDonaldising police professionalism</i>	Dr Richard Heslop	West Yorkshire Police
<i>Leadership and Professional Development, Police Scotland Future directions for professional development in Police Scotland</i>	Ch Supt John Pow	Police Scotland
<i>Personal reflections: key messages of the day</i>	Dr Gill Robinson	Scottish Prison Service, former HM Chief Inspector of Education for Scotland

SIPR-GMU Research Symposium

20 October, Scottish Police College, Tulliallan

Building on an event held last year in Washington DC, and with support from Scottish Government and jointly organised by SIPR and the Center for Evidence-Based Crime Policy (CEBCP) at George Mason University (GMU) in the USA, this symposium brought together researchers and practitioners from both sides of the Atlantic to discuss key issues in contemporary policing.

WORKSHOPS		
Workshop A. Police-Community Partnerships Chair: Peter Wilson QPM		
<i>The process of partnerships: Exploring 'what works'</i>	Megan O'Neill	Dundee
<i>Safer Communities Partnership working in Scotland: developments, challenges and opportunities</i>	Richard Whetton	Improvement Service
<i>Research-Practice-Community Partnerships for Crime Prevention: Lessons from Seattle (Part 1)</i>	Charlotte Gill	GMU
<i>Research-Practice-Community Partnerships for Crime Prevention: Lessons from Seattle (Part 2)</i>	Claudia Gross Shader	City of Seattle
Workshop B. Evidence translation and the challenge of embedding what works I Chair: Sandra Nutley (St Andrews)		
<i>Creating a wake while swimming upstream: sharing observations about what worked and what didn't from a decade of translation inside the Metropolitan Police Service, London</i>	Betsy Stanko OBE	MOPAC
<i>Developing an evidence base for local policing in Scotland</i>	Liz Aston and Ken Scott	Edinburgh Napier/UWS
<i>What do practitioners need to know about what works?</i>	Gloria Laycock OBE	UCL
<i>Rowing together: integrating the craft and science of policing</i>	James Willis	GMU
Workshop C. Police legitimacy I: procedural justice and ethics Chair: Jeffrey Murer (St Andrews)		
<i>Procedural justice in practice: first findings from the Scottish Community Engagement Trial (ScotCET)</i>	Sarah MacQueen & Ben Bradford	Edinburgh & Oxford
<i>Predicting procedural justice shown by the police</i>	Steve Mastrofski	GMU
<i>Police Legitimacy and the street cop: what does procedural justice look like on the street</i>	Renee Mitchell	GMU
Workshop D. Evidence translation and the challenge of embedding 'what works' II Chair: Gloria Laycock (UCL)		
<i>'We can read and write you know!' Selling the idea of research</i>	Jenny Fleming	Southampton
<i>Police-Academic Partnerships: replicating what works and eliminating what doesn't</i>	Robin Engel	University of Cincinnati
<i>Academy Recruit Attitudes in the Context of Evidence-Based Policing</i>	Julie Grieco	GMU
<i>Muslim-airport policing encounters: Opportunities for improving community relations</i>	Leda Blackwood	St Andrews

Workshop E. Police legitimacy II: organisational reform and training Chair: Jeffrey Murer (St Andrews)

Windows of opportunity? Police reform in Scotland in comparative perspective

Nick Fyfe

Dundee

Procedural Justice and Police Training in Scotland: Results of a Trial Project

Annette Robertson,
Lesley McMillan

Partnership Working - Three case studies of police-community partnerships in practice

Held at the state-of-the-art Lasswade Community Centre, this Programme, organised by Chief Inspector Jim Royan, showcased three projects that demonstrated partnership working between Midlothian Council and Police Scotland.

<i>Introductions and welcome</i>	ACC Mike McCormick, CS Gill Imery, Supt Angus MacInnes CI Jim Royan	Police Scotland
<i>The Families Resilience Project</i>	John Brown & Mary Smith Lindsay Hughson Richard Whetton	Midlothian Council Police Scotland Improvement Services
<i>Liquour Licensing and the Regulatory Approach</i> Q & A panel also included	Rosie Kendall & Annette Lang Jim Royan Moira Malcolm & Alan Turpie.	Midlothian Council Police Scotland Midlothian Council
<i>Tackling Anti-Social Behaviour and Violence</i> Q & A panel also included	Kevin Anderson Michelle Ritchie Rosie Kendall & Margaret Brewer	Midlothian Council Police Scotland Midlothian Council

Research and Analysis for Policy and Practice: challenges and opportunities

Many of the organisations involved in shaping police policy and practice also have important research and analytical functions. The main aims of this session, held in the Maxwell Room (Committee Room 4) at the Scottish Parliament, were to explore the challenges and opportunities for developing stronger links between these organisations and the wider research community in ways which are sustainable and of mutual benefit.

<i>Government/Parliamentary perspectives</i>	Graham Ross Euan Dick	Scottish Parliament Information Centre Scottish Government

<i>Police Governance Perspectives</i>	Tom McMahon	Scottish Police Authority
<i>Concluding observations</i>	David Weisburd	GMU

SIPR International Policing Conference 2014 : Technology, Policing and Criminal Justice

22 October 2014, John McIntyre Centre, University of Edinburgh

From enhancing crime control to improving communication with the public, enhances in technology have always played a key role in influencing the development of policing. But if technologies are to be developed effectively, we must have a clear understanding of the technologies they aim to address and the context in which they will be used.

This International Conference, which was supported by Selex ES, CGI, Airwave and the Scottish Government, provided a forum in which police practitioners, policy makers, industry experts and researchers came together to discuss how we maximise the impact of new policing technologies for the benefit of the local communities.

The conference was Chaired by Paddy Tomkins, Director of Droman Ltd and former Chief Inspector of Constabulary for Scotland, and focused on the new technologies that are currently available or are being developed in information and automation, communications, analytics and identification, and sensors and surveillance.

Chair: Paddy Tomkins QPM, Droman Ltd

	Kenny MacAskill MSP	Cabinet Secretary for Justice
	Vic Emery OBE	Chair of the Scottish Police Authority
<i>Introduction to the 42nd James Smart Memorial Lecture</i>	CC Stephen House QPM	Police Service of Scotland

Professor Cynthia Lum receives the James Smart Memorial Medal from CC Sir Stephen House, with Professor Nick Fyfe

The 42nd James Smart Memorial Lecture: 'The Impact of Technology on Modern Policing'

Professor Cynthia Lum

Director, Center for Evidence Based Crime Policy, George Mason University, Washington

TECHNOLOGY WORKSHOPS – Considering needs, gaps and options

Information and Automation

This session presented a forward view of some implications associated with the increasing amounts of digital information and evidential material generated through increased use of technology in the justice process.

- The digital data tsunami: As we look to digitisation to obtain better results for less money, do we really understand the quantum and other implications of the digital information we will be managing, holding, transmitting, sharing and processing?
- Opportunities for Automation: The availability of digital information increases the opportunities for collaboration and automation. This viewed some opportunities for automation throughout the justice process that address existing challenges

Cyber Threats & Responses: What cyber threats permeate the digital world we're entering, what potential responses do we have, cyber-security or cyber-crime... where to invest, the skills shortage, other considerations

Communications and mobile data

This workshop explored and sought feedback interactively from the audience on the following areas:

- Exploiting existing data to better improve decision making and resource management
- How mobile information empowers and supports frontline officers, saving time and money
- The evolution of mobile applications for Public Safety
- Live demonstration of current mobile applications and the next generation that are under trial

Potential mobile applications for the future

Analytics and Identification

Police National Database (PND) - Facial Searching

- A short introduction: What is PND and where does it come from?
- Facial searching: Exploiting a police photographic library of over 12 million images looking for an offender
- Operational use of PND Facial Search: Does it work in practice?
- Future potential discussion: A powerful existing asset - how best to exploit it?

How technology can provide powerful insights for Investigators

- Discovery: changing the way we 'find' information
- How Discovery can be applied in the investigative world
- CGI 'Insight Investigate' demonstration

Discussion - How does this type of technology change the world of policing?

Sensors and Surveillance

- Applicable Classes of Sensor Technology - Current and Possible Future Applications
- Trends in Sensor Technology - size, power, capability, cost etc.
- Operational Benefits from Sensors - Enhancement of Current Capabilities, Possible Future Capabilities

Issues - Sensing versus Data Processing Overheads and Value of Sensor Data and Information

PANEL DISCUSSION – Technology, Policing and Criminal Justice: needs, benefits and deployment

Chair: Paddy Tomkins QPM, Droman Ltd

Euros Evans, Chief Technology Officer, Airwave
Professor Jim Fraser, University of Strathclyde
Steve Howe, Vice President, CGI Police National Database
Professor Cynthia Lum, Director, CEBCP, GMU
Peter Martin, Delivery Director for Bluelightworks, Selex ES
DCC Neil Richardson, Police Scotland
David Robinson, Client Director, Airwave
Cllr Iain Whyte, Scottish Police Authority Board

Alignment between recent and current policing research and knowledge exchange projects and Police Scotland Priorities 2014/15

(See also recent and current PhD projects)

POLICE SCOTLAND PRIORITIES 2014/15

- Violence, disorder and antisocial behaviour ["VIOLENCE & DISORDER"]
- Protecting Vulnerable People ["PROTECTING VULNERABLE PEOPLE"]
- Road safety and road crime ["ROADS POLICING"]
- Serious organised crime and counter-terrorism ["SOG & CT"]

Main Police Scotland Priority	Project or Workshop Title	Researcher/ Collaborator	Institutional affiliation	Research Type
PROTECTING VULNERABLE PEOPLE	Mixed economy policing and workforce modernisation	Scott & Sproat / Central Scotland Police	UWS	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Developing a mobile App to support child interviewers	La Rooy Ferguson Gabbert	Abertay Goldsmiths	Research Project (SIPR funded)
PROTECTING VULNERABLE PEOPLE	Investigating signed language interpreting in legal settings across Europe	Boser	Heriot-Watt	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Improve the quality of inter-personal encounters between police and citizens	Robertson McMillan Godwin Deuchar	Glasgow Caledonian UWS	Research Project (SIPR / Scottish Government funded)
PROTECTING VULNERABLE PEOPLE	Collective radicalization and police-community encounters	Blackwood	St Andrews	Research Project (SIPR funded)
PROTECTING VULNERABLE PEOPLE	European Study of Youth Mobilisation	Murer	St Andrews	SIPR Research
PROTECTING VULNERABLE PEOPLE	Developing an evidence-base for local policing in Scotland	Aston Scott	Edinburgh Napier UWS	SIPR IMPAKT Award
PROTECTING VULNERABLE PEOPLE	Scoping exercise for Safer Communities Evidence Matrix Scotland	Aston Scott	Edinburgh Napier UWS	Research Project (SIPR funded)
PROTECTING VULNERABLE PEOPLE	Subjective well being of offenders with intellectual disability	Lindsay Carson	Abertay	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Custody visiting in Scotland	Fyfe Elvins	Dundee	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Rural policing	Fenwick Dockrell	Stirling	Research Project (SIPR funded / external award)
PROTECTING VULNERABLE PEOPLE	Evaluation of 'Plus- One Mentoring' Scheme	Brown Smith van Blerk	Dundee	Research Project (external award)

Main Police Scotland Priority	Project or Workshop Title	Researcher/ Collaborator	Institutional affiliation	Research Type
PROTECTING VULNERABLE PEOPLE	Community wellbeing	Frondigoun McKendrick	Glasgow Caledonian	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Evaluation of Turnaround	Frondigoun Morrison Dorrer	Glasgow Caledonian	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Forensic toxicology and the application of pharmacogenetics to forensic science	Savage	Strathclyde	SIPR Research Lecturer
PROTECTING VULNERABLE PEOPLE	Obtaining best evidence from young eyewitnesses	Havard	Aberdeen	Research Project (SIPR funded)
PROTECTING VULNERABLE PEOPLE	Immediate recall tests and eyewitness suggestibility	Gabbert	Abertay	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Geographies of missing people	Parr Fyfe Woolnough	Glasgow Dundee	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	Assessing the quality of interviews with children alleging sexual abuse in Scotland	La Rooy Gabbert	Abertay	Research Project (external award)
PROTECTING VULNERABLE PEOPLE	An analysis of Grampian Police missing person 'closure-interview' forms	Woolnough	Grampian Police	Research Project (SIPR funded)
PROTECTING VULNERABLE PEOPLE	Interagency adult support and protection practice of police and health and social care professionals: a realistic evaluation approach	Joseph Klein Heyman Diack	RGU	Research Project (SIPR funded)
PROTECTING VULNERABLE PEOPLE	Dual reports of domestic abuse made to the police in Scotland	Brooks	Glasgow	Research Project (SIPR funded)
ROADS POLICING	Evaluating the impact of using the principles of procedural justice during routine encounters with citizens	MacQueen Norris	Edinburgh	Research Project (SIPR / Scottish Government funded)
ROADS POLICING	Take control - a road safety education evaluation	Kelly	Grampian Police	Research Project (external award)
SOG & CT	Evaluation of the National Forensic Science Gateway	Fraser	Strathclyde	Research Project (SIPR funded)
SOG & CT	Police Crime and Intelligence Analyst Training	McVie Gayle Thomson	Edinburgh	Research Project (SIPR funded)
SOG & CT	The governance of security for G2014	Burman Fyfe Johnson Mackenzie Hamilton-Smith McConnell	Glasgow Dundee Stirling	Research Project (external award)
SOG & CT	Accelerating professional judgement & decision making expertise: feedback and scenario-based training in crime scene examination	Martindale	Edinburgh	Research Project (SIPR funded)

Main Police Scotland Priority	Project or Workshop Title	Researcher/ Collaborator	Institutional affiliation	Research Type
SOG & CT	Surveillance techniques	Scott-Brown	Abertay	Research Project (external award)
SOG & CT	Investigative use of forensic science and data interpretation	NicDaeid Fraser	Strathclyde	Research Project (external award)
SOG & CT	Explosive detection	NicDaeid	Strathclyde	Research Project (external award)
SOG & CT	Validation of a method for the detection of Mephedrone	Kerr De Korompay	SPSA	Research Project (SIPR funded)
SOG & CT	Obtaining Human DNA From Animal Carcasses	Welsh Govan (SPSA)	Strathclyde	Research Project (external award)
SOG & CT	Developing coordinated approaches to investigating fires in Scotland	NicDaeid	Strathclyde	Research Project (SIPR funded)
SOG & CT	Criminal Justice and Police Studies / Money laundering and asset recovery	Sproat	UWS	SIPR Research Lecturer
SOG & CT	The effectiveness of police negotiator training	Brown	Scottish Police College	Practitioner Fellowship
VIOLENCE & DISORDER	Evaluation of a Taser Pilot in Strathclyde Police	Scott	UWS	Research Project (external award)
VIOLENCE & DISORDER	Local policing in Scotland	Aston	UWS	Research Project (SIPR funded)
VIOLENCE & DISORDER	An evaluation of Fife Constabulary's Community Engagement Model	Hunter Fyfe	Dundee	SIPR Research
VIOLENCE & DISORDER	The evaluation of Stop and Search Pilot – Fife Division	O'Neill Aston	Dundee Edinburgh Napier	Research Project (Police Scotland / SIPR funded)
VIOLENCE & DISORDER	Community Intelligence	Fyfe Hamilton-Smith Mackenzie	Dundee Stirling Glasgow	Research Project (external award)
VIOLENCE & DISORDER	Community Policing and the development of Safer Neighbourhood Teams in Lothian and Borders	Henry Mackenzie	Edinburgh Glasgow	Research Project (SIPR funded)
VIOLENCE & DISORDER	Policing young people in the contemporary urban realm: Dundee's Community Warden Scheme	Brown	Dundee	SIPR Research
VIOLENCE & DISORDER	Public Order Policing in Comparative Perspective	Gorringe Rosie	Edinburgh	Research Project and SIPR Seminar
VIOLENCE & DISORDER	Evaluating the value of Crimestoppers to Police Scotland	NicDaeid	Strathclyde	Research Project (SIPR funded)
VIOLENCE & DISORDER	A public health approach to the evaluation of the Glasgow Community Initiative to Reduce Violence	Donnelly	St Andrews	Research Project (SIPR funded)

Main Police Scotland Priority	Project or Workshop Title	Researcher/ Collaborator	Institutional affiliation	Research Type
VIOLENCE & DISORDER	Dual Reports of Domestic Abuse made to the Police in Scotland	Brooks	Glasgow	Research Project (SIPR funded)
VIOLENCE & DISORDER	Domestic abuse and police victim interaction	MacQueen Norris McVie	Edinburgh	Research Project (SIPR funded)
VIOLENCE & DISORDER	Processes of collective identity formation and their relationship to enactments of violence	Murer	St Andrews	SIPR Research Lecturer
VIOLENCE & DISORDER	Policing, communities, and youth crime and violence in the east end of Glasgow	Nicholson Frondigoun	Glasgow Caledonian	SIPR Research Lecturer
VIOLENCE & DISORDER	Evaluation of a Dispersal Zone in the east end of Glasgow	Robertson McMillan	Glasgow Caledonian	Research Project (external award)
VIOLENCE & DISORDER	Tackling youth gang issues on campus - a case study	Smith Frondigoun	RGU Glasgow Caledonian	Research Project (SIPR funded)
VIOLENCE & DISORDER	Youth Gang Culture and Working collaboratively within partnerships	Ross Deuchar, UWS / SIPR / Scottish Police College	UWS	Research and SEMINAR
VIOLENCE & DISORDER	The impact of the Offensive Behaviour at Football and Threatening Communications (Scotland) Act	Hamilton-Smith Simpson Haynes Morrow Goodall McArdle Batchelor	Stirling Glasgow	Research Project (external award)
VIOLENCE & DISORDER	Evaluation of the effectiveness of the Scottish Government's 'Whole System Approach' to dealing with offending by young people.	Murray	Edinburgh	Research Project (external award)
VIOLENCE & DISORDER	RIO (Remote Internet Observation)	Coull Ferguson MacLeod	Abertay	Research Project (SIPR funded)
VIOLENCE & DISORDER	Determining the factors that link crime occurrence to the characteristics of the local environment in which the crime has been committed.	Illian Jones-Todd Borchers	St Andrews	Research Project (external award)
